

India, Corona Virus Second Wave, Reasons, Second Wave Virus, COVID-19 Disease: Analysing the Reason for Rise of Deaths

Yerra Praneeth

Abstract: *We are all aware of the huge destruction of deaths occurring in India because of corona virus. The second wave of India, witnessing more human loss compare to the first wave .here we have analyzed the situation in detail and has got some facts, which are the main causes of second wave in India and rise of no positive cases and more number of deaths. In this we have believed that the more gatherings which could be because of various reasons like could be elections, religious mela and people living carelessly wearing no mask in the months of January, February are the reason for rise of corona virus.*

Keywords: Corona virus, Elections Mela, second wave, India, death, Gatherings, COVID-19 disease, rise of positive cases.

Procedure

Here are some facts collected which proves, which are the reasons for the rise of number of positive cases in India and more number of deaths

Step 1:

Observation 1;

Dehradun news

9.1 million thronged Mahakumbh despite Covid-19 surge: Govt data

The Kumbh Mela Force, a government body, said 9.1 million pilgrims took the holy dip in the Ganga from January 14 to April 27.

By Sandeep Rawat, Dehradun

The above is an official article published in the newspaper which made me to draw an inference, a reason for more number of positive cases and more number of deaths in India

My observation from the above evidence force me to draw a conclusion that a virus, which is still obligate intracellular in nature, we have given more chance for the virus to find its host easily.

The 9.1 million people gathered for what so ever reason given much more chances for the virus to enter in to a host.

Step 2:

Observation 2:

India Population

1,391,439,052

India Population (1950 - 2020)

The population of India also one of the main reason for rise of more number of corona virus, as India is having more that 100 crore population where the average population living a particular area is huge, large in number which is very difficult to maintain social, physical distance. We have all forgot that where ever the habitat there only the organisms love to live, so for the corona virus, as it an obligate

intracellular parasite it loves to find its host so as India is one the world's largest population obviously it is one of the reason for the more number of positive cases.

Step 3:

Observation:

The above picture was collected form an newspaper which shows that people are involved in the election rallies with the masks .but still election rallies, meetings definitely involves large crowds ,gatherings which will make the life of the virus so easy, it finds its host very easily.'

The most another important aspect of the above picture signifies and I want to tell through my research paper to the whole world and India that undoubtedly wearing mask protects you from the deadliest virus, but it is equally important how are you wearing it, that means is it covering your nose or mouth, if it is not covering your nose which is considered as the gate way for the virus to enter in to the host, you are the source for the virus.

Conclusion

The above steps, observations taken in to consideration I confirm, conclude my observation report, results is that definitely it is human mistakes, errors what we have, Indian people have done which could be like not maintaining physical distance, attending large gatherings which could be like elections, mela, all kinds of religious gatherings of all religions and also not wearing mask properly to the nose are the possible reasons for the rise of more number of positive cases, second wave in India and more number of deaths.

I also conclude that the lack of oxygen is the reason of deaths; I clearly specify that death due to corona virus is different statement and death of a patient due to shortage of oxygen is a different statement. Proving enough oxygen definitely the patient survival chances will be more.
