

The Sequential Even and Odd Number Identification in Decimal Numbers by Formula

Keerthivasan Chandrasekaran

Definitions

1) E_{sn} = Sequential Even numbers.

$$E_{sn} = 2, 4, 6, \dots, O_{sn}$$

2) N_{sn} – Whole Number

$$N_{sn} = 0, 1, 2, 3, 4, \dots$$

3) O_{sn} = Sequential Odd Numbers

$$O_{sn} = 1, 3, 5, 7, \dots, E_{sn}$$

4) sn = nth Position of the Whole number or the Even number or the odd number.

S_n refers position.

$$\text{If, } S_n = 1, N_{sn} = 0, E_{sn} = 1, O_{sn} = 2$$

$$\text{If, } S_n = 2, N_{sn} = 1, E_{sn} = 3, O_{sn} = 4$$

$$\text{If, } S_n = 3, N_{sn} = 3, E_{sn} = 5, O_{sn} = 6$$

Explanation:

In the whole number, we start from 0 to infinite.

By using the formula, we can find the sequential even number and odd number in the decimal number system.

Starting from first even number to nth even number are known as E_{sn} and starting from first odd number to nth odd number are known as O_{sn} .

All these even and odd numbers are within Whole number starting from 0.

$$\text{If } sn = 1,$$

$$E_{sn} = 1$$

$$O_{sn} = 2$$

$$\text{If } sn = 2 (sn+1)$$

$$E_{sn} = 3$$

$$O_{sn} = 4$$

$$\text{If } sn = 3 (sn+2)$$

$$E_{sn} = 5$$

$$O_{sn} = 6$$

Formulae:

To find the odd number in the sequence of whole number:

If both base sn for Even and odd numbers are same.

$$1) E_{sn} = O_{sn} + 1$$

To find the Even number in the sequence of whole number:

If both base sn for Even and odd numbers are same.

$$1) N_{sn} + N_{sn+1} = O_{sn}$$

Proof:

1) Formula 1: ($E_{sn} = O_{sn} + 1$)

For example:

$$\text{If } sn = 1,$$

$$O_{sn} = 1$$

$$E_{sn} = 2$$

$$\text{If } sn = 2 (sn+1)$$

$$O_{sn} = 3$$

$$E_{sn} = 4$$

$$\text{If } sn = 3 (sn+2)$$

$$O_{sn} = 5$$

$$E_{sn} = 6$$

$$1) sn = 1$$

$$\text{Formula: } E_{sn} = O_{sn} + 1$$

$$\text{LHS: If } sn = 1,$$

$$E_{sn} = 2$$

$$\text{RHS: } E_{sn} = O_{sn} + 1$$

$$O_{sn} = 1 + 1 = 2$$

$$E_{sn} = 2$$

$$\text{LHS} = \text{RHS.}$$

$$2) sn = 2$$

$$\text{Formula: } E_{sn} = O_{sn} + 1$$

$$\text{LHS: If } sn = 2,$$

$$E_{sn} = 4$$

$$\text{RHS: } E_{sn} = O_{sn} + 1$$

$$\text{If } sn = 2, O_{sn} = 3$$

$$E_{sn} = 3 + 1 = 4$$

$$E_{sn} = 4$$

$$\text{LHS} = \text{RHS}$$

$$3) sn = 3$$

$$\text{Formula: } E_{sn} = O_{sn} + 1$$

$$\text{LHS: If } sn = 3,$$

$$E_{sn} = 6$$

$$\text{RHS: } E_{sn} = O_{sn} + 1$$

$$\text{If } sn = 3, O_{sn} = 5$$

$$E_{sn} = 5 + 1 = 6$$

$$E_{sn} = 6$$

$$\text{LHS} = \text{RHS}$$

$$2) \text{ Formula 2 } (N_{sn} + N_{(sn+1)}) = O_{(sn)}$$

For example:

$$\text{If } sn = 1,$$

$$O_{sn} = 1$$

$$E_{sn} = 2$$

$$N_{sn} = 1$$

$$\text{If } sn = 2 (sn+1)$$

$$O_{sn} = 3$$

$$E_{sn} = 4$$

$$O_{sn} = 2$$

$$\text{If } sn = 3 (sn+2)$$

$$O_{sn} = 5$$

$$E_{sn} = 6$$

$$N_{sn} = 3$$

$$1) \quad sn = 1$$

$$N_{sn} + N_{(sn-1)} = O_{sn}$$

LHS: If $sn = 1$,

$$O_{sn} = 1$$

RHS:

If $sn = 1$,

$$N_{sn} = N_1 = 0$$

$$N_{(sn+1)} = N_2 = 1$$

$$\text{Formula: } N_{sn} + N_{(sn+1)} = O_{sn}$$

$$0+1 = 1$$

$$O_{sn} = 1$$

$$\text{LHS} = \text{RHS}$$

$$2) \quad sn = 2$$

$$N_{sn} + N_{(sn-1)} = O_{sn}$$

LHS: If $sn = 2$,

$$O_{sn} = 3$$

RHS:

If $sn = 2$,

$$N_{sn} = N_1 = 1$$

$$N_{(sn+1)} = N_2 = 2$$

$$\text{Formula: } N_{sn} + N_{(sn+1)} = O_{sn}$$

$$1+2 = 3$$

$$O_{sn} = 3$$

$$\text{LHS} = \text{RHS}$$

$$1) \quad sn = 3$$

$$N_{sn} + N_{(sn-1)} = O_{sn}$$

LHS: If $sn = 3$,

$$O_{sn} = 5$$

RHS:

If $sn = 3$,

$$N_{sn} = N_1 = 2$$

$$N_{(sn+1)} = 3$$

$$\text{Formula: } N_{sn} + N_{(sn+1)} = O_{sn}$$

$$2+3 = 5$$

$$O_{sn} = 5$$

$$\text{LHS} = \text{RHS}$$

Background and Rough proof:

0, 1, 2, 3, 4, 5.....N

$$0+1 = 1 \text{ (Even Number or } E_{sn}) \text{ (} N_{sn} + N_{sn+1} = O_{sn} \text{)}$$

$$1+1 = 2 \text{ (Odd Number of } O_{sn}) \text{ (} E_{sn} = O_{sn} + 1 \text{)}$$

$$2+1 = 3 \text{ (Even Number or } E_{sn}) \text{ (} N_{sn} + N_{sn+1} = O_{sn} \text{)}$$

$$3+1 = 4 \text{ (Odd Number of } O_{sn}) \text{ (} E_{sn} = O_{sn} + 1 \text{)}$$

$$2+3 = 5 \text{ (Even Number or } E_{sn}) \text{ (} N_{sn} + N_{sn+1} = O_{sn} \text{), etc.,}$$
