

The authors will be glad to submit freely a version of the adsorption model and provide support in its use as long as the original manuscript is quoted.

## 5. Acknowledgment

This study was performed with the support of the Israeli Ministry of Agriculture program No.862-0231-10.

## Author Profile

**Prof. Giora Rytwo** obtained his MSc in Micrometeorology and his PhD in Soil Physical Chemistry. He has published, since 1995, more than 70 papers in peer-reviewed journals. He was the first Head of Environmental Sciences Department in Tel Hai Academic College, and performs his research at the Environmental Physical Chemistry Laboratory of MIGAL (Galilee Research Institute). Research interests include the use of modified nanoparticles for water treatment, organoclays and nanocomposites for efficient drug or pesticide delivery, adsorption/desorption processes, and the educational aspects of physicochemical environmental issues. From 2009-2013 was Head of the Teaching Clay Minerals Committee, at the International Organization for Clays Research (AIPEA). Sivan Margalit finished in 2014 her M.Sc. in Biotechnology at the Faculty of Sciences and Technology of Tel Hai College
