

# Synthesis, Characterization and Antimicrobial Activity of various Chalcone Derivatives

Aayushi Sharma<sup>1</sup>, D. P. Pathak<sup>2</sup>

<sup>1,2</sup>Department of Pharmaceutical Chemistry, Delhi Institute of Pharmaceutical Sciences and Research (DIPSAR), New Delhi-110017, India

**Abstract:** Chalcone are precursor of the natural occurring flavonoids family. Chalcone consists of two aromatic rings linked by three carbon carbonyl system. The chemistry and biological activities of Chalcone has motivate to synthesis Chalcone as a potential compound for antimicrobial activity. In the present work, a series of Chalcone derivatives were synthesized by Claisen-Schmidt Condensation reaction in which various substituted benzaldehyde and acetoaryl were condensed in the presence of aqueous alcoholic alkali solution. The structures of these compounds were confirmed on the basis of the spectral data. The compounds were screened for their antibacterial activity against *B.subtilius*, *S.aureus*, *E.coli*, *P.aureginosa* and antifungal activity against *A.niger*. The results indicate that synthesized compounds have appreciable antibacterial and antifungal activity.

**Keywords:** Chalcone, acetoaryl, antimicrobial activity, parallel synthesizer, MIC.

## 1. Introduction

The need of new antimicrobial agents has increased as misuse and overuse of antibiotic has created multidrug resistance, this has resulted in global health crisis. So, it has become inevitable for development of new and effective broad spectrum antimicrobial agent and with which there is no cross resistance with the available drugs. The pharmacological activities and chemistry of Chalcone has developed interest to synthesis various Chalcone derivatives for their antimicrobial activity.

Chalcone with antibacterial properties have been known since the 1940s (Deepa Gupta *et al.*, 2010). Chalcone is an open chain flavonoid in which two aromatic rings are linked three carbon  $\alpha$   $\beta$  unsaturated carbonyl system which is responsible for their biological activities (Ramesh *et al.*, 2012). Chalcone are well known intermediates for synthesizing various heterocyclic compounds like benzothiazepine (O Prakash *et al.*, 2005), pyrazolines (RY Prasad *et al.*, 2005), 1,4 diketones

(S Raghavan and K Anuradha, 2002) and flavones (BA Bohn, 1998). Chalcones and its derivatives have shown a wide variety of therapeutic activities like antifungal (Bekhit A. A and Habib N. S, 2001), anti-oncogenic (Lopez S. N, 2001), anti-inflammatory (Kumar S. *Ket al.*, 2003), anti-ulcerative (Hsieh H. *Ket al.*, 1998), analgesic (Murakami *Set al.*, 1991), antiviral (Viana G. S.; Bandeira M. A.; Matos F. J, 2003) anti-bacterial (Wu J. H.; Wang X. H.; Yi Y. H.; Lee K. H, 2003), antimalarial (Liu M.; Go P.; Wilairat M. L, 2001), antiprotozoal (Lunardi *Fet al.*, 2003), antifilarial (Awasthi S *Ket al.*, 2009), larvicidal (Begum NA; Roy N;

Laskar RA; Roy K, 2010), anti-convulsant (Kaushik S; Kumar N; Drabu S, 2010), anti-oxidant (Vogel S; Ohmayer S; Brunner G; Heilmann J, 2008). They have also shown inhibition of the enzymes, like mammalian  $\alpha$ -amylase (Najafian *Met al.*, 2010), cyclooxygenase (Zarghi *Aet al.*, 2006) and monoamine oxidase (Chimenti *Fet al.*, 2009).

There are various methods to synthesis Chalcone and its derivatives. The most convenient and simplest method is Claisen-Schmidt Condensation Reaction. In the present work, we report reaction between various acetoaryl and substituted benzaldehyde in the presence of aqueous alcoholic alkali solution to form Chalcone derivatives.

## 2. Experimental

The melting point was determined by Lab India Visual Melting point Apparatus and uncorrected. The IR spectra of the synthesized compounds were recorded on Bruker ATR spectrophotometer. The <sup>1</sup>H NMR were recorded in CDCl<sub>3</sub> using Bruker NMR spectrometer and chemical shifts are reported as parts per million (ppm) using tetramethylsilane (TMS) as internal standard. All the compounds were synthesized by Rodleys Tech Parallel Synthesizer. Reactions were monitored using thin layer chromatography (TLC). The visualization was done using iodine vapour.

## 3. Scheme of Synthesis

### 3.1 Scheme 1

**3.1.1 List of substituted benzaldehyde**

1. benzaldehyde
2. 2-nitrobenzaldehyde
3. p-chlorobenzaldehyde
4. 3-nitrobenzaldehyde
5. p-methoxybenzaldehyde
6. 2,4-dichlorobenzaldehyde
7. p-dimethylaminobenzaldehyde
8. cinnamaldehyde

**3.1.2 Synthetic procedure****3.2 Scheme 2****3.2.1 List of Substituted Benzaldehyde**

1. benzaldehyde
2. 2-nitrobenzaldehyde
3. p-chlorobenzaldehyde
4. 3-nitrobenzaldehyde
5. p-methoxybenzaldehyde
6. 2,4-dichlorobenzaldehyde
7. p-dimethylbenzaldehyde
8. cinnamaldehyde

**3.3 Scheme 3****3.2.2 Synthetic Procedure**

To a solution of 1-acetylnaphthalene(0.02mol) taken in a 250ml round bottom flask ,added cooled mixture of 10% potassium hydroxide and ethanol , stirred thoroughly, then solution of substituted benzaldehyde (0.02mol)was added .The reaction mixture was kept for reflux for 2hour on parallel synthesizer at 115°C,85rpm.The solvent was drained and lump obtained was washed with cold water till it become neutral and recrystallized from ethanol. The recrystallized product was kept in cold water for overnight.

**3.3.1 List of substituted benzaldehyde**

1. benzaldehyde
2. 2-nitrobenzaldehyde
3. p-chlorobenzaldehyde
4. 3-nitrobenzaldehyde
5. p-methoxybenzaldehyde
6. 2,4-dichlorobenzaldehyde
7. p-dimethylbenzaldehyde
8. Cinnamaldehyde

**3.3.2 Synthetic procedure:-**

To a solution of 2-acetylnaphthalene(0.02mol) taken in a 250ml round bottom flask ,added cooled mixture of 10% potassium hydroxide and ethanol , stirred thoroughly, then solution of substituted benzaldehyde (0.02mol)was added .The reaction mixture was kept for reflux for 2hour on parallel synthesizer at 120°C,95rpm.The solvent was drained and lump obtained was washed with cold water till it become neutral and recrystallized from ethanol. The recrystallized product was kept in cold water for overnight.

**Table 1: Physical Data of synthesized compounds**

Compound	Molecular Formula	Molecular Weight	M.P(°C)	Yield (%)
A1(1,3-diphenylprop-2-en-1-one)	C <sub>15</sub> H <sub>12</sub> O	208	55-59	68.05

-----	------	--	---

antibacterial activity. Ketoconazole was used as reference standard for antifungal activity.

#### 4. Antimicrobial Activity

All the synthesized compounds have been screened for antibacterial against two Gram positive Bacteria-*B.subtilius* and *S. Aureus* and two Gram negative bacteria- *E.coli* and *P.aeruginosa* and for antifungal activity against *Aspergillus niger* using Serial Dilution Method. Ciprofloxacin was used as reference standard for

Serial Dilution method is used to determine Minimum Inhibitory Concentration (MIC) of antimicrobial agent to inhibit the microorganisms. This can be achieved by dilution of agents in either agar or broth medium. In the present study, Broth dilution method was used to determine MIC.

Nutrient Broth medium was used for antibacterial activity and Sabouraud medium for antifungal activity. All the synthesized compounds were diluted into 2,4,8, 16,32µg/ml and DMSO was used as control.

chlorophenyl)-1-(naphthalen-1-yl)prop-2-en-1-one), **A14**(1-(naphthalen-1-yl)-3-(3-nitrophenyl)prop-2-en-1-one), **A15**(3-(2,4-dichlorophenyl)-1-(naphthalen-1-yl)prop-2-en-1-one), **A17**(1-(naphthalen-2-yl)-3-phenylprop-2-en-1-one), **A18**(3-(4-chlorophenyl)-1-(naphthalen-2-yl)prop-2-en-1-one), **A19**(3-(4-methoxyphenyl)-1-(naphthalen-2-yl)prop-2-en-1-one), **A21**(1-(naphthalen-2-yl)-3-(2-nitrophenyl)prop-2-en-1-one), **A22**(1-(naphthalen-2-yl)-3-(3-nitrophenyl)prop-2-en-1-one)&**A23**(3-(2,4-dichlorophenyl)-1-(naphthalen-2-yl)prop-2-en-1-one) are found to be more active than all other compounds. The Chalcone are found to be more active as antifungal than antibacterial.

Compounds	(MIC)

#### 5. Result and Discussion

From the above Result, it is found that compounds **A1**(1,3-diphenylprop-2-en-1-one), **A2**(3-(4-chlorophenyl)-1-phenylprop-2-en-1-one), **A10**(3-(4-chlorophenyl)-1-(naphthalen-1-yl)prop-2-en-1-one), **A17**(1-(naphthalen-2-yl)-3-phenylprop-2-en-1-one), **A18**(3-(4-chlorophenyl)-1-(naphthalen-2-yl)prop-2-en-1-one) and **A22**(1-(naphthalen-2-yl)-3-(3-nitrophenyl)prop-2-en-1-one) are comparatively more active than all other compounds, for both Gram-Positive and Gram-Negative bacteria. The Chalcone are found to be more active for Gram-Negative bacteria compare to gram-Positive.

For the anti-fungal activity compounds **A3**(3-(4-methoxyphenyl)-1-phenylprop-2-en-1-one), **A5**(3-(2-nitrophenyl)-1-phenylprop-2-en-1-one), **A6**(3-(3-nitrophenyl)-1-phenylprop-2-en-1-one), **A10**(3-(4-

#### 6. Conclusion and Future Scope

Various Chalcone derivatives are synthesized by Claisen-Schmidt Condensation Reaction and evaluated for their antimicrobial activity. The screening of synthesized compounds for antimicrobial activity showed that these compounds have appreciable antimicrobial activity. The results provide insights that will aid the optimization of the Chalcone derivatives for the better activity and may prove helpful for further lead optimization, virtual screening, molecular docking and molecular dynamics studies.

#### 7. Acknowledgement

The Author is sincerely thankful to (Prof) Dr. D. P. Pathak, Director and HOD, Department of Pharmaceutical Chemistry, Delhi Institute of Pharmaceutical Sciences and Research(DIPSAR),University of Delhi,New Delhi.
