Abstract: A survey of ethnomedicinal plants of Shahdol division has been carried out with co-operation of Kol tribal villagers. During study 31 ethnomedicinal plants have been identified for the treatment of various disease. Harbarium has been prepared which contains information pertaining to botanical name, local name. Plants used their dose and process of administration.

Keywords: Ethnomedicine, Kol tribe, Shahdol division, Practices

1. Introduction

Shahdol division is north eastern part of Madhya Pradesh state. It is lying between 23°01'47" N latitude and 81°02'21" E longitude. Total geographical area sums up to 5671 sq./Km. and has a population of 908148. Shahdol is rich in vast resources of forest and minerals. It is bounded in the north by Satna and Sidhi district, in the east by Korea district, in the south by Anuppur district, in the west by Umaria district. The area is full of water springs which come out on the top hill slopes. The Shahdol division is average rainfall is 85.11% and above temperature 13.6 0C. The Kol tribes living in some villages situated in and around Shahdol division. They depend solely on their surrounding forest for most of their requirement for food to medicines.

2. Material and Methods

The area is floristically very rich and harbours a wide range of biodiversity. People living in these forests and adjacent rural areas depend upon plants for their daily needs and food. Kol tribal villagers have good knowledge about medicinal plants and their uses in different types of diseases. A persual of literature shows that no systematic study and survey from ethnobotanical and ethnomedicinal point of view has been carried out in the present area of investigation. The present communication deals with 30 ethnomedicinal plants used by the tribal communities in habiting the region of Shahdol division for various disease treatment by the Koltribals. The plants are arranged alphabetically each by botanical name, family, local name and use of plants. Plants were collected during flowering period with the help of tribals and vaidys. Parts of ethnomedicinal plants used in the treatments of many types disease and other informations were recorded as stated by the Koltribals andvaidyas. The specimens were identified with the help of published flora and relevant authorities. Some other workers who have contributed in the field of ethnobotany as Jain(1963), Ahirwar (2010),Khan et al (2008) and Verma (1995).

3. Results and Discussion

We have identified 31ethnomedicinal plants, which are uses by Koltribals of Shahdol division in their daily life for the treatment of various diseases. Most of these plants are wild and some plants are cultivated. The ethnobotanical plants have been listed alphabetically (Table-1).

</table>
Meliaceae  
Azadirachta indica (L.) Juss.  
Neem  
Bark, leaf and fruit decoction is antiseptic and used in ulcer, eczema and skin diseases.

Mimosaceae  
Acacia nilotica (L.) Del.  
Babul  
Bark used in diarrhea, dysentery and diabetes.

Mimosaceae  
Albizia lebbeck (L.) Wild  
Siris  
Bark and seeds given in piles and diarrhea.

Nyctaginaceae  
Boerhaavia diffusa L.  
Punarnava  
Root is laxative and used in asthma, jaundice and dropsy.

Papaveraceae  
Argemone mexicana L.  
Pilikateli  
Stem latex used in dropsy, jaundice and conjunctivitis.

Papaveraceae  
Papaver somniferum L.  
Afeem  
Flower, fruits and Seeds have pain releasing and sleeping effects and useful in irritating cough, pneumonia, ulcers, gastritis and influenza.

Rutaceae  
Bel  
Fruits is given in diarrhea dysentery irritation of alimentary canal, fever and as tonic and cooling agent.

Sapotaceae  
Madhuca longifolia (Koe n) Mac Br.  
Mahua  
Decoction of bark is used in incurring bleeding gums and ulcers. Flowers are used in cough and bronchitis.

Solanaceae  
Datura stramonium L.  
Dhatura  
Drug consists of dried leaves, flowering tops and seeds are used in treatment of asthma. Stramonium as one of the main ingredients is used as expectorant, antispasmodic, demulcent and anodyne in cough and asthma. (Leaves and seeds are narcotic and sometimes used for criminal poisoning).

4. Acknowledgement

The authors are thankful to their respective college authorities for granting permission to carry out of this work. They are also thankful to tribals and rural people who co-operated in sharing their knowledge on ethnomedicinal practices.
