Abstract: A strong banking sector is important for an economy like ours. In our country, the banking sector has undergone a major change after 1991 and subsequently credit management. Due to which, in recent years banks have become more cautious in extending loans. The reason being mounting of non-performing assets. The non performing assets (NPA’s) reflect the performance of a bank. High level of NPA’s reflect high amount of defaults & ultimately affect the profitability of the banks. The present paper makes an attempt to identify the causes of NPA’s in Regional Rural Banks viz J&K Grameen Bank and also to suggest few strategies for reducing them.

Keywords: NPA’s, performance of banks, Profitability.

1. Introduction

After Nationalisation of banks in July1969, there has been tremendous growth in the banking industry and tremendous efforts were made to enhance the disbursement of credit in both priority and non priority sectors. However after 1991, with the opening of the Indian economy and with the introduction of financial sector reforms, banks become more cautious in sanctioning of loans and advances on account of piling NPA’s.

2. Meaning of NPA’s

An asset is classified as NPA’s if due in the form of principal & interest and not paid by the borrower for a period of 90 days. A non performing asset shall be a loan or an advance where-

1) Interest/installment or principal remain overdue for a period of more than 90 days in respect of a term loan.
2) The account remains ‘out of order’ for a period of more than 90 days in respect of an overdraft/cash credit.
3) The bill remains overdue for a period of more than 90 days in the case of bills purchased and discounted.
4) Interest or installment of principal remains overdue for two harvest seasons but far a period not exceeding two half years in the case of an advance granted for agricultural purposes & W.e.f. 30-09-2004, following further amendments were issued by the apex bank:-

- A loan granted for a short duration crops will be treated as NPA’s if the installment of principal or interests their on remains overdue for two crop seasons.
- A loan granted for a long duration crop will be NPA’s if the installment or principal or interest their on remains overdue for one crop season.
- Any amount to be received remains overdue for a period of more than 90 days in respect of other accounts.

If any advance or credit facility granted by banks to a borrower becomes non performing, then the bank will have to treat all the advances/ credits facilities granted to that borrower as non performing without having any regard to the fact that there may still exist certain advances/credit facilities having performing status. As per the procedural norms suggested by RBI, a bank cannot book interest on an NPA on accrual basis.

3. Classification of NPA’s/ Asset classification

Once an asset falls under the NPA category, banks are required by RBI to make provision for the uncollected interest on these assets. For the purpose they classify their assets based on the strength and on collateral securities into:-

1. Substandard assets (2005), which has remained NPA for a period less than or equal to 12 months.
2. Doubtful assets: Which has remained NPA for a period less than or equal to 12 months.
3. Loss assets: Where loss has been identified by the bank or internal or external auditors or the RBI inspection but the amount has not been written off wholly. It is an asset identified by the bank auditors or by RBI inspection as a loss asset. It is an asset for which no security is available or there is considerable erosion in the realizable value of the security.

4. Objectives

The present study aims that the growth in NPA’s should be checked, as growth and profitability of the banks & financial institutions depends upon the level of income generated. However the main objectives of the study are:-

a) To highlight the NPA position of J&K Grameen bank.
b) To identify the various causes of NPA’s.
c) To make few recommendations on the basis of research work carried out.

5. Methodology

For the present study data has been collected from the primary and secondary sources. The secondary data has been collected from head office of the Grameen bank. So far as, primary data is concerned, the same has been collected by holding group discussion and interaction with the borrowers.
of the Bank from five branches of district Rajouri i.e. Rajouri, Palma, Manjakote, Chingus and Dungi. In addition discussions were also held with the bank officials.

6. Analysis and Discussion

</table>

Table 1. given above deals with the classification of loan assets of the bank from 2009 to 2013-14. It is clear from the table that the total advances of the bank have increased right from 2009-10 to 2013-14. However, the table also shows light on the NPA position of the bank. It can be seen that there is growth in the NPAs of JKGB over five years whereas the quantum of increase in the amount recovered is only Rs.1041 lakhs. So, there is a low performance in the collection of amount from outstanding NPAs. The provision created against NPAs has been gradually increased from 2009-10 to 2011-12 while in 2012-13 the provision created against NPAs was low. However from the data given in table no. 3, it can be seen that how the bank is keeping provision against NPA’s.

Table 2: Recovery of NPA’s in J&K Grameen Bank for five years from 2010 to 2014

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount (Rs in Lakh)</th>
<th>Amount Recovered (Rs in lakhs)</th>

</tbody>
</table>

Table 2. shows quantum of NPAs and amount recovered from NPAs in absolute terms and rate of recovery from year to year over five year period. It is interesting to note that the quantum of increase in the NPAs of JKGB is so significant whereas the quantum of increase in the amount recovered from the outstanding NPAs is showing a fluctuating trend. The amount recovered out of outstanding NPAs of Rs.4179 lakhs in 2009-10 was Rs. 1342 lakhs whereas the amount recovered out of NPA amount of Rs.4713 lakhs in 2010-11 is only Rs.1041 lakhs. So, there is a low performance in the collection of amount from outstanding NPAs. The performance in the collection of NPAs in 2011-12 increased a little as compared to previous year but it again decreased to 24% in the year 2012-13 and constantly decreased in the year 2013-14. From the foregoing analysis, one can infer that there is growth in the NPAs of JKGB over five years from 2009-10 to 2013-14. However, there is no major increase in the collection of amount from the outstanding NPAs over the study period of five years.

</tbody>
</table>

Table 3. reveals the provision of NPAs and the percentage of provision in the outstanding NPAs. The provision created against NPAs has been gradually increased from 2009-10 to 2011-12 while in 2012-13 the provision created against NPAs was low. There are a number of reasons for NPA’s. A few to mention are as under-

A. Internal factors:-
1. Appraisal system
2. System of sanctioning of loans
3. Delegation of powers for sanctioning of loans
4. Scrutiny of various information given by the borrowers.
5. Pressure of targets
6. No follow up of recovery
7. Shortage of staff

B. External Factors:-
1. Political Interference
2. Competition among different Banks
3. State of the economy
4. Natural Calamities

7. Recommendations and Solutions for Non Performing Assets:

Regular Training Program
Executives have to undergo regular training program on credit and NPA management. It is very useful and helpful to the executives for dealing the NPAs properly.

Recovery camps
The banks should conduct regular or periodical recovery camps in the bank premises or some other place, such type of recovery camps reduced the levels of NPA in the banks

Spot Visit
The bank officials should visit to the borrower’s business place / borrowers field regularly or periodically.

Credit Appraisal and Risk Management Mechanism
A lasting solution to the problem of NPAs can be achieved only with proper credit assessment and risk management mechanism (Chakraborty, 2012). The documentation of

credit policy and credit audit immediately after the sanction is necessary to upgrade the quality of credit appraisal in banks. In a situation of liquidity overhang the enthusiasm of the banking system is to increase lending with compromise on asset quality, raising concern about adverse selection and potential danger of addition to the NPAs stock. It is necessary that the banking system is equipped with prudential norms to minimize if not completely avoid the problem of credit risk.

8. Conclusion

Banks in the financial system are very significant role in the financial existence of the nation. The strength of the economy is closely related to the reliability of its banking system. The problem of NPAs can be achieved only with appropriate credit appraisal and risk management mechanism. It is very important for the bank to keep the level of NPA as low as possible. Because NPA is one kind of barrier in the success of a bank which affects its performance. And this management can be done by following way:

- Credit assessment and monitoring,
- Timely sanction and or release of loans by the bank are to evade time and cost overruns.
- Working personnel should inspect the level of inventories/receivables at the time of evaluation of working capital.
- Identifying reasons for rotating of each account of a branch into NPA is the most significant factor for advancement of the asset quality, as that would help begin suitable steps to raise the accounts.
- The recovery machinery of the bank has to be modernized; targets should be set for field officers / supervisors not only for recovery in general but also in terms of upgrading number of existing NPAs.
- Due to lower credit risk and consequent higher profitability, greater encouragement should be given to small borrowers.
