

The patient's exact location is displayed in the map to provide service in emergency.

**Test case for ambulance**

| Test Case ID | Test Input | Expected Result | Remarks |
|---|---|---|---|
| To verify sending message to ambulance driver. | In the server screen, click on view readings. Click on send message. Enter the mobile number and location details. Click on send. | Driver receives the location details and receives the patient. | PASS |

**Send Message to Ambulance Driver**

After tracing the map location, the details of patients location is sent to the ambulance driver.

## 7.Conclusions and Future Enhancements

The paper concludes that pervasive healthcare will enable a paradigm shift from the established centralized healthcare model to a pervasive, user-centered and preventive overall lifestyle health management. In order to provide these new opportunities everywhere, anytime and to anyone, future research in the fields of pervasive sensing, pervasive prevention and evaluation of pervasive technology is inevitably needed. Pervasive healthcare offers both, healthcare professionals and patients, new opportunities. On one side, medical doctors and other healthcare professionals will benefit from diagnostic and therapeutic opportunities far beyond what is possible with today's occasional examinations. They will have access to long-term recordings of physiological data measured in natural environment including patient's activity and the situations to which he has been exposed to. On the other side, patients are empowered to take a more active role in their personal health management and prevention. For example, user feedback or even personal coaching might help a patient to adjust his lifestyle to the requirement of his health.
