

information can be used for further analysis. These results are achieved when predictions are made on data sets. Variety of data sets can be introduced for further analysis. Varieties of techniques are available which can be used to incorporate new research in churn prediction. Present method is based on cloud computing but in future it can be incorporated to multiple software platforms to achieve different results. Since the research in churn prediction increasing rapidly. So our requirement to achieve optimal result in less time.

Author Profile

Navneet kaur received the B.tech degree in information technology from Bhai Maha Singh College of Engineering & Technology, Muktsar, Punjab in 2012. In 2014, she is currently working on research work. Her area of interest is in cloud environment.

Pawansupreet Kaur is an associate professor in Shaheed Bhagat Singh College of Engineering & Technology, Ferozepur, Punjab. Her area of interest is in cloud environment and in networking.
