

## 4. Conclusion

In this report, we have discussed the literature survey of the filtering system. We are developing a system to filter undesired messages from OSN walls. The wall that restricts the unwanted message called as the Filtered Wall (FW). In this report we discussed the idea about the system. Additionally, we studied strategies and techniques limiting the inferences that a user can do on the enforced filtering rules with the aim of bypassing the filtering system, such as for instance randomly notifying a message that should instead be blocked.
