

Figure 4: Recommendation for Coastal Tourism Development

4. Conclusion

Based on coastal tourism suitability analysis, the potential villages that can be developed as coastal tourism area are Pangandaran, Pananjung, Wonoharjo, and Cikambulan Village, while the potential villages based on the public acceptance level analysis are Pangandaran, Pananjung, Wonoharjo, Cikambulan, Ciliang, and Sukaresik Village. Therefore, the development direction for coastal tourism, based on the merger of two analysis results, can be conducted in four villages, namely Pangandaran, Pananjung, Wonoharjo, and Cikambulan Village.

5. Recommendation

Institutionalisation in the context of decentralization and autonomy in coastal resource management should be seen as a form of collaborative management on global, national, regional, and local scale. It aims to maximize the use of coastal areas potential in the best possible way. In the local scale, the coastal areas collaborative management should consider the rights of local people, local laws, institutions, and local wisdom as a form of community participation and self-reliance in the coastal tourism management.

The results of this study are expected to be taken into consideration for the Local Government of Pangandaran Regency as a sustainable coastal tourism management strategy and as an input in the spatial plan design and coastal areas zoning plan in Pangandaran Regency.
