Abstract: PT IPB Shigeta Animal Pharmaceutical is one of the producers of poultry vaccine in Indonesia. This company produces avian influenza vaccine called Bird CLOSE 5.1 using reverse genetic technology. Until now, this company is only sell three varieties of poultry vaccines. Meanwhile, it needs at least nine varieties of vaccines needed to maximizing poultry breeding. Business development strategies need to be taken in order to elevate the competitiveness of the company in meeting customers demand of high quality, safe, and effective poultry vaccine in Indonesia. This study is descriptive-qualitative with case study approach. This study conducted business model mapping into nine elements of business canvas model to analyze current business strategies taken by the company. Moreover, SWOT analysis was conducted to nine elements of business canvas model. The result of this study shows improvement in business canvas model and business development alternative strategies for PT IPB Shigeta Animal Pharmaceuticals.

Keywords: Business canvass model, alternative strategies, SWOT, poultry vaccines, PT IPB Shigeta Animal Pharmaceuticals

1. Introduction

There are nine poultry vaccines are used in breeding poultry health for consumption in Indonesia. Unfortunately, the high demand of poultry vaccines is still dominated 80% by imported products. Indonesia government has banned import permit for Avian Influenza (AI) vaccine based on Ministry of Agriculture Policy Number 3445 13 July 2011. This policy open opportunity for local vaccine producer to produce local Avian Influenza vaccine.

Vaccine AI is the first product produced by the company during its establishment due to the spread of AI disease in Indonesia in 2004. According to Yudhastuti and Sudarmaji (2006) Avian Influenza is vicious virus which character is zoonosis (able to spread from animal to human). In order to comprehend the spread of AI virus, the company decided to produce AI vaccine as one of the solution towards the spread of this vicious virus spread which causes bird flu in Indonesia.
The graph above shows the growth of AI vaccine total sales of PT IPB Shigeta Animal Pharmaceuticals from 2010-2015. There is consistent growth of total sales from 2012 to 2015 with slight decrease in 2011. In 2013 PT IPB Shigeta Animal Pharmaceuticals able to produce and sold 56,090 bottles which equals to 56,090,000 dosage of AI vaccine. This trend shows that PT IPB Shigeta Animal Pharmaceutical in 2013 has market share of 10 percent from total AI vaccine demand in Indonesia. This trend indicates the opportunity for the company to produce other vaccine products due to its success in AI vaccine. Therefore, business development strategies need to be designed for PT IPB Shigeta Animal Pharmaceuticals to increase its competitiveness in AI vaccine industry and propose business development strategy design for other vaccine products.

According to Wheelen and Hunger (2010), overall cost leadership or differentiation are among business strategy or competition strategy. Business strategy emphasize on strategic decision making which involve competitive position from a particular product or market share from a business. Business strategy better integrate various functional activities to achieve goals and mission of the company. According to Tim PPM Manajemen (2012) business strategy is description of a relationship between company’s competitiveness and resources as well as its activities conducted to acquire and produce values that generate profit. According to Giesen, Riddleberger, Christner, and Bell (2010) business model innovation is a crucial for a business success in an complex and fast-moving environment just like today. Business leaders need to understand when the conducting business model need to be adapt by current condition and how to perform change management. In complex and fast-moving business environment, organizations need to rethink about their business model more often than what they did on the past. Velu and Khanna (2013) stated that business model innovation is an important thing to impose by company for the sustainability of the business.

Business model canvas is one a business model that describe the thinking foundation about how an organization or company create, deliver, and capture values. Business model canvas concept able to be a common language which enable to describe and manipulate business model to create new alternative policies (Osterwalder dan Pygneur 2010). There are nine elements in business model canvass; customer segment, customer relationship, channels, value proposition, key resources, key activities, key partnership, cost structure, and revenue stream.

According to problem statements above, the purpose of this study is to develop business development strategy for PT IPB Shigeta Animal Pharmaceuticals. The strategy development started from business model canvass approach by create a company condition mapping into nine elements of business model canvas. The next process is conduct SWOT analysis towards nine elements in business canvas model. The result of SWOT analysis is used to improve business model canvas and to develop alternative business development strategy for PT IPB Shigeta Animal Pharmaceuticals.

2. Research Elaborations

This study is conducted in PT IPB Shigeta Animal Pharmaceuticals office at FKH IPB campus Jl. Agatis IPB Dramaga Campus, Bogor. This research is conducted in six months started from November 2015 to May 2016.

Data collected for this study consist of primary and secondary data. Primary data is collected from questionnaire, direct observation, and in depth interview as well as FGD (Focus Group Discussion). Primary data is consist of information about internal and external condition of the company as well as all information related to the nine aspects of business canvass model. The secondary data retrieved from the company is used only for complement primary data. Secondary data retrieved from company documents which related to the study such as the information of poultry breeder union, Ministry of Agriculture, and other literatures.

Data that collected from depth interview is conducted by interviewing external respondents such as President Director of Bogor Life Science and Technology (BLST) as well as avian influenza expert from faculty of veterinarian IPB. Focus group discussion was also conducted with internal respondents such as Commissioner, President Director, Operation Director, Production Manager, Quality Control Manager, and Marketing Assistant Manager of PT IPB Shigeta Animal Pharmaceuticals. Secondary data is collected from literature study and relevan institutions for this study. There are eight respondents participated in this study.
