

Aircosmo Theory, Dimentutal Mind and the Ex-Paranormal

Jatin S. Wahane¹, Rutvik M. Rathod²

Space Exploration Programme Topology

Abstract: A model consistent with Aircosmic Theory is proposed for so-called paranormal phenomenon such as extra-sensory perception (ESP). Our observations and mathematical skills are assumed to derive from a special 'Aircosmic space', whose origin is explained on the basis of Space-time theory and The special theory of Relativity, taking in account the need for the information processes associated with existence in multiple dimensions of an object and inter connection of every dimension with respect to each other. The paper concludes with a critique of arguments sometimes made claiming to 'rule out' the possible existence of paranormal phenomenon.

Keywords: ESP, Aircosmic theory, Aircosmic space

1. Introduction

Critics of claims of the paranormal, e.g. Deutsh (2001), have declared extrasensory perception (ESP) or other paranormal phenomenon to be 'nonsense'. Such absolutist positions give little weight to the experimental evidence, Radin(1997) in support of the reality of such processes, and seem naïve given the range of imaginative and mathematical proposals concerning the nature of reality currently being put forward for serious consideration by conventional physicist. As Carr (2001, 2003) (whose approach is centered on the alternative Randall-Sundrum picture) has suggested, such a change in prospective opens up new possibilities in science, including the possibility of accommodating paranormal phenomenon within physics. In the following, a number of concepts are combined, each in essence consistent with accepted ideas, resulting in a qualitative explanation for paranormal events, with the promise of an eventual clear cut basis for understanding Aircosmic phenomenon in general.

2. Neat Need

Highly illogical claims of the paranormal, e.g. Brian D. Josephson (2012), have declared "thought bubbles" as the reason of paranormal. Such absolutist position give little weight to find evidence, and support the reality of such processes and promotes observation proposals and mathematics concerning the nature of reality being put forward by other physicist. Places with paranormal activities are being recognized, e.g. Bhangarh Fort situated in Asabgarh, Alwar, Rajasthan in India.

"There are two legends narrated to the history of the fort city, which is reported to be haunted, and no one is allowed to remain in the precincts of the fort at night, per a notice board put up by the Archaeological Survey of India at the entrance.^{[1][7]} One version of the legend is that a sadhu named Baba Balak Nath lived within the fort area. It was his injunction that any houses built in the precincts of the fort should not be taller than his house, and if the shadow of any such house fell on his house, it would result in destruction of the fort town.^[8]

In another version, (N.K. SINHAI, the wizard who was adept in black magic fell in love with (Ratnavati, the princess of Bhangarh who was very beautiful and had suitors to marry her from many royal families of the country. One day the princess, 18 years of age, went shopping with her friends and was buying Ittar (scent). The wizard saw this and replaced the scent with a love potion in order to ensnare the princess. He offered the potion to her so that she would take a liking to him and marry him.^{[8][9]} However, the princess saw through the wizard's trickery, and when he offered her the bowl of potion, she threw it onto a big boulder nearby. As a result, the boulder started rolling down towards the wizard and crushed him. Before he died, he cursed that Bhangarh would be destroyed soon and no one would be able to live within its precincts. Subsequently, Bhangarh Fort was invaded by the Mughals from the north and the city was surrounded and sacked; 10,000 people lived in the fort city at that time. All the people in the fort, including the princess, were killed. The present state of the fort is attributed to the curse of the wizard and people believe the ghosts in the fort are that of the princess and the wizard.^{[8][9]}"(Reference

It is a government recognized haunted place. It gave a chance for physicist to give explanation of science behind it. In the following, a number of concepts are combined, each in essence consistent with accepted ideas, resulting in a qualitative explanation for paranormal events, with the promise of an eventual clear cut basis for understanding Aircosmic phenomenon in general.

3. The Aircosmic Space

Length (x), breadth (z), and height (y) are the three dimensions which together form our daily space and we have time as our 4th dimension. As said by Einstein, our daily space and time are connected in some way.

As,
 $S = f(t)$,
where, 'S' is change in daily space,
'f(t)' is function of time.
 $Xi^{\wedge} + Yj^{\wedge} + Zk^{\wedge} = f(t)$

So, similarly, every (11) dimension is connected to each other in form of some functions.

Now, one can say that, a change in 'nth' dimension can lead to some change in another dimension.

As, 1st, 2nd and 3rd dimensions consist of our daily space. It is practically not possible to see other dimensions then our daily space is normal conditions. Similarly, there can be another space with 5th, 6th and 7th dimensions as their constituents and 8th dimension as their prospective of time. Let us name the space as 'Aircosmic Space' and the 8th dimension as "Aero-time". Let us assume, Aircosmic space also consist of life and let the name of organisms as 'anti-humans'.

The interconnection and the now ex-paranormal

When a living body dies, it liberates a lot amount of energy from it, let us name it 'aero-energy'. This energy is found high among the non-natural death. The reason behind it is, as the time passes, the capacity to hold energy decreases. As a result of non-natural death, a high amount of energy is being released. When such very large amount of energy is accumulated in a place where other energies are low, it leads to interconnection of dimensions and sometimes between space i.e. between our daily space and aircosmic space, which lead to some disturbances in both the spaces.

And, another thing to keep in mind is every dimension is connected to each other (Refer section: 3), so the changes in aircosmic space can lead to some changes in our daily space. The changes transfer in form of energies.

4. Conclusion

As energies can travel dimensions, the paranormal views one can see and paranormal one can hear, is just light and sound energies respectively formed due to disturbance occurred due to aircosmic space.

The paranormal movements we see or feel in so-called paranormal events are the results of action occurred in Aircosmic space.
