

Amalus Gravitational Theory

Amal Raju

How to Be Gravity Opposite Force of Gravity

Abstract: Gravity it is a force all objects attracting earth by the force of gravity in earth all areas have gravity by the shape of round. How to produce gravity? How to reduce gravity? How to opposite force of gravity? These are Main 3 points of gravity. The mass is gravity more mass have more gravity force earth attracting all thinks there mass earth mass > object mass (1/2) gas pulling to earth and forcing gravity.

1. Introduction

Gravity is a force this force make stand objects in earth how the gravity produce where from gravity force where the gravity forcing what is opposite force these 4 focusing this theory gravity has main; elements for see in front of general.

- 1) Round
- 2) Rotation, rotation make round
- 3) Atmosphere/gas (seeing only)
- 4) Travel

It focusing atmosphere force /gas pressure

Air (mix of gas) is also atmosphere; mix of gas's and sum scurry. The scurry is not pressure, the gas is pressure to earth, and inside atmosphere any object the gas also pressure that object and any hole in atmosphere gas traying to fill there

Description 1: atmosphere pressure/gas pressure

Earth has atmosphere. Atmosphere has all gases and scurry. They all are attracted to earth by their base weight. **The gasses all time pressuring to earth by condition of weight and also they "trying to freedom from gravity"**

All planets have atmosphere and atmosphere pressure and also stars have atmosphere and pressure. And other some rock ulka and some blast etc... Have just small gravity?... all gravity have planets and any think they have atmosphere with any gases and there shape is round and they are rotating

Rotation

Round these 3 are main facts of gravity

Atmosphere

Earth and moon compare, moon has less atmosphere so the moon has less gravity

The 'space is vaccum' because any gases and scurry and anything attract there near big mass like any planet etc... And also joining that gases and scurry rocks etc.. And make new gravity by if anything rotates. That is the low of universe (rotation)

The gas is all-time pressuring to earth. The more weight has gas more close and more pressure to earth. That base is weight. **The gas/ atmosphere pressuring to earth any**

object inside the atmosphere that object the atmosphere pulling to earth. And also the speed determine by the condition of object weight size (stone, paratute, papper)

The object to object the gas pressure is also defrnd, because there atomic weight and size. The weight is equal to atomic weight and molecular distance

2. Experiment

Amalus Bottle Water Gas/Air Experiment Outfit

- 1- 1 litter bottle 3. Same size
- 2- 1 litter water, petrol, diesel
- 3- Lamb
- 4- Timer
- 5- Weight

Test

Take 1 litter water, petrol, and diesel in bottles
Bottle height is 25 cm

One bottle bottom to top 5 c.m height one **socket tic by nail** (small) and stand there nail. The taps not open. Then the **nail leaves** then look to bottle. What see? The **water does not flow outside?**

Then next step the **tap open** from bottle then look at now the **water will flow outside with speed and force.** How? "That is gas pressure"

So the time of close the tap why the water will not flow outside? Because closed bottle inside water does not affect gas pressure. **Why the earths not attract that water by the way of socket? So the earth attraction is not (only) gravity.** Then open that bottle when the water will flow out by the socket way, that mean gas pressure is gravity (one fact) and repeat and repeat it

Hole /topside tap size

In the case of tap hole size is big or small the gas pressure is same not the condition of hole size. For flow to outside the water just one small perforation is need for the tap side.

Socket size bottom

But in the bottom side the socket size affecting. If big socket the water will flow out by the tap open or not. Small socket is only possible why? **If big size socket also**

Volume 6 Issue 11, November 2017

the earth attraction is not affect there. by the gas attraction is also affect their side to pressure inside to socket **light is only travel straight-line but the gas is travel in any line any way** that is the reason of big socket flow. Bottom to tap also the gas will pressure, **if anywhere the gas not have the gas will trying to fill there** like without atmosphere pressure the hot water trying to make hot anywhere have the cold water in same beaker (majority affect there)

Draw 1 tap not open

In this shape the tap not open so the water will not flow out by the way of socket tap is open

Draw 2

In draw 2 the tap is open so the water will flow to out by the way of socket "that mean the earth attraction is not gravity so the gas pressure is gravity (earth not produce gravity (direct))

Draw 3 if the socket is big

If the socket is big the bottle tap open or not the water will flow to out. It back earth attraction is not if the tap close also the gas pressure to the way of big socket and then the water flow out not the earth attraction

3. Experiment Part 2

GAS pressure is gravity "**where the gas/air pressuring**"

1-Water

General water

1 liter Water weight= 1 kg
First open the tap distance water flow = 21c.m
 The time for stopping the water flow=5.20 minute

2-Petrol

Same bottle
 1 liter petrol weight=750g
First open the tap distance petrol flow= 20c.m
 The time for stopping the petrol flow=6.42 minute

3-diesel

Same bottle
 1 liter Diesel weight=820g
First open the tap distance diesel flow= 19c.m
 The time for stopping the diesel flow=6.40 minute

The deferent's between water and diesel petrol. Water is some mix but the diesel and petrol only have those pure atomic molecules

- 1-The **top** side 'hole size is big or small perforation' anyway the gas pressure is same
- 2-The **bottom** side 'socket size is small or big the water only flow to out by the gas reach inside bottle. If socket small, the tap open then only the water out. if socket big, tap open or not that socket way the gas move to inside bottle and water flow to out
- 3-if the **height** decrease the water flow distance will decrease also the **width** increase the water flow distance will decrease

Draw-1

Socket height 5c.m (balance water) "if 1 liter upside" have the water flow is more distance"

bottle socket size small change make variations

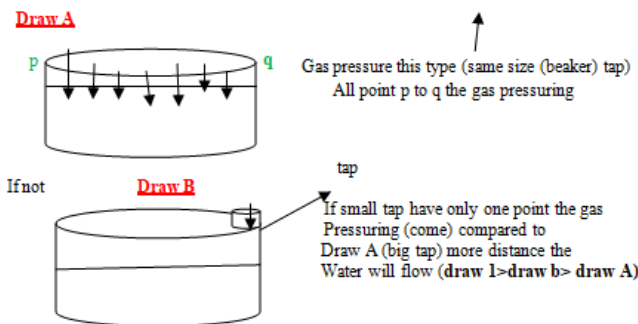

Draw-2

Socket height 7c.m (balance water) "if 1 liter upside have" the water flow is less distance"

These two draws socket upside have 1 liter water. But the distance flow of water change. Because the area **p to q (10c.m)** pressuring gas in water is more "**gas pressure down' to water**" (earth). The height is less so the far side to pressure is less socket is right side but the water have 10c,m so the down pressure of gas make less' distance water flow. **the gas pressure so the water focusing to socket, reason is the gas also water more down to pressure.**

Draw A

Weight

The height, tap, socket, size anyway the **weight/atomic weight** are main mater

Gas pressure amount decided by the quantity of water/atomic weight.

If The tap hole size is perforation the gas pressure is same because the gas is pressuring atomic weight

Water

Water weight is 1 kg density is

First More distance water flow, that reason is more weight compared to petrol diesel

- Weight decided by molecular distance with atomic weight.
- Less time 5.20 taken to complete water flow because of the atomic weight is more. Atomic weight Is more so the gas is more close and force and fast to water and complete fast
- Gas is also atom so the gas is pressuring to atomic weight by molecular joining

Petrol

Weight-720

Density-950

The petrol weight <water weight so

The first petrol flow' distance< water flow

The time' take for complete > water. Because atomic weight, weight is less compared to water so the gas pressure is less force and less speed. **Petrol is more jelly (VISCID) compared to water.** So the last time. Time more take

Diesel

Weight-820

Density

Diesel weight

Diesel is also same to petrol and **also jelly** condition is have in diesel

Liquid with jelly (viscid)

Petrol and diesel some 'viscid'

That mean the gravity more they love there exist. And for there exist they trying to join viscid and cannot outside

Finishing time the gas pressure is same but the "**atomic weight is less and that balance part join to fight opposite to gas pressure**" so last time, more time taken to finish and some balance have (height. socket to stopping flow)

Weight is more; the gas down pull to water (also to earth) is more quantity. e.g. 1 KG weight the gas pull 1 kg more pressure to down (1 kg down pressure)

And then weight decrease, the gas is same, pressure is same, but the down pull weight is less e.g. 100g, gas pressure to down (100g down pressure only)

"Gas is always pressure, but gas with atomic weight join then down pressure is the main gravity"

Gas pressure + atomic weight= gravity force

There for the gas pressuring is to atomic weight

4. Experiment Part 3

Solids gas pressure with atomic weight

Solids also facing gas pressure

These two are solids weight is same but the size is different

The cardboard affecting gas pressure is more area p to q and the stone affecting gas pressure is small area a to b but the pressure is same how? Because the gas is pressuring atomic weight.

Cardboard molecular 'distance' more and 'atom weight' is less so the size is more

The gas pressure is "going molecule to molecule" by transfer atoms. Weight is transfer. Like heat transfer atom to atom in a steel/iron "Waves Transfer"

And sound transfer iron etc...
 "Transfer is big matter of gravity"

So size is large or small the gas pressure is same gas pressuring to object atomic weight total
 50 g cardboard and 50 g stone gas pressure is same

So the liquid or solid the gas is pressuring to atomic weight
 Gas pressure + atomic weight = gravity force

Without gas how the gravity? By amalus.....

Opposite force of gravity

Atmosphere have by gas
 Gas pressure is gravity so the opposite force of gravity will opposite to gas
 Gas pressuring down to earth they weight basis

All time and always opposite to gravity two thinks have "fire and heat" and also they stand only overhead
 Fire need oxygen to blaze fire is all time opposite to gravity. Fire produce two thinks one light and other heat but heat not compulsory to produce light and fire

Deferent's b/w fire and heat fire attract oxygen so the fire only opposite to oxygen without oxygen the fire not work
 Fire work with oxygen and opposite to all gas's
 Wire inside have more heat and fire is heat and near is heat

But in the place heat. heat no need of oxygen, all gas's the heat will fight to opposite

The heat will work all gas's and without gas
 So the heat is opposite force of gravity and gas pressure

Also 'to space travel and space travel using fire and heat

Cold air will more close to earth because of weight and hot air go to upward because of heat make weight decreases hot air balloon is also use hot air

In any object have heat that are opposite to gravity
 Eg. Ice-heat-water-heat-weeper-heat- then air will opposite to gravity

Same like any other object solid, liquid, gas will heat heat and last will opposite to gravity (heat affecting all opposite)

ash etc.. balance that not go but then more heat that will go

5. Main points

Gravity

It is a force all objects attracting by earth. Every planet have gravity

- 1) Gas pressure to earth, earth also have atomic weight every object make from atom. that atmosphere inside any object have the gas pressuring to earth inside that object will down to earth.
- 2) Big mass attracting small mass's if earth with moon that will crash
- 3) And moon's weight stand moon exist
- 4) The gas is pressuring not the size of objects gas is pressuring atomic weight
- 5) Without gas how the gravity and also same speed b/w different objects ?
- 6) Gas pressure is gravity so the opposite force of gravity is fire /heat
- 7) Without gas how the opposite force gravity?
- 8) Gas pressure+atomic weight= gravity force
- 9) Which gas is more force that like their weight oxygen is main earth other planets other gas's
- 10) Gravitational transfer, weight transfer by atoms gravity transfer by atoms
- 11) All atoms transfer gravitational waves but in the case of gas's is more concentrable

6. Conclusion

- 1) What is gravity? Gravity is a force it produces by which way? How it affect
- 2) Gas pressure is gravity but without gas how the gravity, which gas is more force to earth
- 3) gravity also transferring object in the gas pressure transfer by atoms
- 4) The gas is pressuring atomic weight the fire and heat opposite to work and opposite to gravity force heat is main opposite force of gravity because heat work with without oxygen
- 5) Air (mix of gas) is also atmosphere; mix of gas's and sum scurry. The scurry is not pressure, the gas is pressure to earth, and inside atmosphere any object the gas also pressure that object and any hole in atmosphere gas trying to fill there
- 6) In the case "scurry storm" that is also force from air temperature change
- 7) Gas's is only possible to forcing to atomic weight (inside pressure)
- 8) Waves passing (without gas how the gravity by amalus) I will show.
- 9) One stone upside other stone that was general force also that face gas pressure

- How to produce
- Where from
- To where
- Opposite force
- Zero gravity
- Gravitational waves. seeing in front of ice
- And all clarify continue.....

- Address: Kollakotu (h0) Koodathai (po) Thammerssery 673573 Kozhikode Kerala India.
- Sir: it is my gravitational theory 15% part. If you support maximum (**money with news**) we will make zero gravity etc... I want support.
- **Sir my life one ambition is making and clear answers my questions and doubts i stopped my plus two second year for thinking and then join degree but I not go to college. I stopped one more time for thinking**
- **Bank account no. 0530053000003005**
- Zero gravity 'harry potter game'
- Zero gravity 'basketball court'
- Zero gravity 'football stadium'
- Zero gravity 'forest'
-
- 1-water go to the under of earth
- 2-escape velocity
- 3-incoming velocity
- 4-opposite force of gravity
- 5-difrend weight in different objects
- 6-in empty gas/air same speed b/w different weight objects
- 7-tide
- 8-tidnes
- 9-how to make gravity (very simple)
- 10-how to make zero gravity (very simple)
- 11-how to be the universe
- 12-simple and powerful equation
- And 5 think balance
- All my theory "fact thinks" direct from nature "god"
- MY MARRIAGE FROM SPACE HONEYMOON FROM MOON SUBJECT TELL ALL (NEWS)
- AIRCRAFT GO TO SPACE PART HAVE
- I WANT MONEY
- Please support my challenge you tub: "amalus gravitational theory"
- Without support and news I never support if you support if you want pick me
- Mc^2 converted to continuation speed I want study
- How to make Gulliver kingkong dinosaur I want study
- Please support me sir
- One task to scientist food department
- Food have any poison that poison inform any object make (food attack affected my health "I have no writing habit minute to minute SPOT time thinks and theory making ", outside food i stop then I 50%recover)
- Money come then 30 days after, minute to minute thinks if you want I show
- And also possible to maybe show my superpower
- If you want touch my protection theory minimum I want 1 lack army with 300 aircraft
- And any question to universe i will make answer with reason
- And any want in the universe i will make (my thinks and theory's)
