Abstract: Ahara (Food), Nidra (Sleep) and Bramhacharya (Abstinence) are described to be the Tryopsthambhas. Inclusion of Ahara in the three Upsthambh proves its importance. In Ayurveda, Viruddha Ahara is specified as the substance who provokes and mobilizes the Doshas (body humor) but not eliminate it from the body. In modern, Viruddha Ahara can be taken as an understanding of dietary allergy which results in a vast array of morbidities from acute anaphylactic reaction up to the development of chronic systemic diseases. Acharya Charak has described eighteen factors (Desha-Kala-Agni-Matra Viruddha etc.) which are responsible for dietetic incompatibility and various diseases. The quality of Viruddha Ahara provides a cumulative detrimental effect to the body after their repeated consumption. Aim: To explore the concept of pathogenesis by Viruddha Ahara along with modern perspective. Materials and Methods: For this conceptual study Ayurveda Samhitas like Charak Samhita, Sushruta Samhita, Ashtang Hridya, Madhav Nidana, internet and modern medical literature have been reviewed. Observation and Conclusion: On the basis of Ayurveda and modern pathogenesis it can be concluded that the Viruddha Ahara is responsible in genesis of auto-antigens specially belonging to the various diseases. It should be stopped by taking some prevention modalities like do not take wrong combination of food and must follow the rules and conditions which are safe for our health. Prevention is always claimed better than cure.

Keywords: Viruddha Ahara, Ama Visha, Eicasanoids

1. Introduction

Ayurveda is a holistic system of medicine that originated from Vedas. The aim of the Ayurveda is to maintain health of healthy persons and to cure disorder in the diseased [1]. Ahara, Nidra and Brahmacharya are Triupsthambha in Ayurveda. Ahara is one of the most important pillars of healthy life [2]. Viruddha Ahara is considered as a major etiological factor for various morbidities in Ayurveda. Acharya Vagbhhatta stated that Viruddha Ahara is specified as the substance which vitiates the Dosha but does not eliminate them out of body. It remains in the body even when it is unfavourable to the Dhatus. According to Acharya Charak the substance having characteristics opposite to the Dhatu become Vaidrodhika or incompatible to it. Single or repeated consumption of Vaidrodhika Ahara is responsible for various morbidities including the Amavisha formation. In this regard, Acharya Charak has described eighteen factors which are Desha-Kala-Agni-Matra-Satmya-Doshas-Samskar-Viry-Koshtha-Avasita-Karma-Parihar-Uchhara-Paka-Samyoga-Hridaya-Sampad-Vidhi Viruddha, they are responsible for dietetic incompatibility. Acharya Charak has described diseases like- Kshandya (Impotency), Andhata (Blindness), Visarpa (Erysipelas), Dakodar (Ascites), Unmanda (Insanity), Bhagandar (Fistula), Murccha (Syncope), Mada (Alcoholism), Adhmana (Abdominal distention), Pundu (Anaemia), Kilas-Kushtha (Skin disorders), Grahani Roga (IBS), Iwara (Fever) and Santana Dosh (lack of interest in progeny) etc. are commonly originated due to use of Viruddha Ahara[3]. In present scenario due to increasing health hazards as a Viruddha Ahara, there is need to explain the concept of Viruddha Ahara with their role in disease pathogenesis and modalities of treatment and prevention in present era.

2. Aim and Objective

To explore the concept of pathogenesis by Viruddha Ahara along with modern perspective.

3. Materials and Methods

The study is designed as a conceptual study and for this conceptual study Ayurveda Samhitas like Charak Samhita, Sushruta Samhita, Ashtang Hridya, Madhav Nidana, internet and modern medical literature have been reviewed.

Concept of Pathogenesis by Viruddha Ahara

• As per Ayurveda due to single or repeated consumption of Viruddha Ahara disturbs the normal fuctions of Agni (digestive fire) as a result food not properly digested, yields immature Rasa in the Anamahaya and this undergoes fermentation and putrefaction because of its retention for longer duration, it menifests as Ama. Ama is absorbed in the system and it is taken up by the aggravated and vitiated Vayu, now this excessive vitiated or unripe Amarasa enters the Dhamani by circulation, here this Dushita Amarasa amalgamates with the existing Vata-Pitta-Kapha Doshas. Vitiated further in excess and produces distress in the body due to its excessive unctuous nature and leads to producing various diseases [4].

• According to modern, C₂₀ and C₂₂ PUFA are obligate components of mammalian cell membrane phospholipid (PLs) and cholesteryl esters (CEs). C₂₀ PUFA is the precursor of a range of metabolically active eicasanoid products like prostaglandins (PGs), thromboxanes (TXs) and leukotrienes (LTs). Arachidonic acid metabolites are the established inflammatory mediators. PGE₂ acts as a proinflammatory and a sensitizer for evoking pain and also stimulates osteoclastic activity and bone erosion. Prostaglandins and other eicasanoids are having many other diverse effects. It is clear that the increased amount of eicasanoid precursors like arachidonic acid leads to an
increased formation of prostaglandins and eicosanoids which provokes hyperalgesia, synovial oedema, bone erosion and ulcerogenic activity leads to produce various diseases[8].

4. Discussion and Result

Nutrition plays major role in maintaining quality of life. As per Ayurvedic texts, Viruddha Ahara is responsible for Amavisha formation and causes diseases as described by Acharya Charak. Mode of action of Viruddha Ahara explained in terms of modern concept of eicosanoid precursors. In this discussion it is clear that the incompatible dietary habits are responsible for determining the nature and quantity of eicosanoid precursors and Amavisha in humans and play a important role to producing various diseases. In such diseases we should give the treatment that inhibits or reduces the formation of eicosanoid precursors or Amavisha.

5. Conclusion

By the above discussion, it is concluded that, enlist the causative factor of incompatible food is very important to avoid various health hazards. We should take some prevention modalities like do not consume wrong combination of food and follow rules and conditions which are safe for our health as mentioned in Samhitas. Acharya Charak described the management of diseases which produced by Viruddha Ahara- Vamana Karma, Virechana Karma, use of substances having opposite properties of Viruddha Ahara, use of opposite pacificatory measures and use Rasayan (rejuvenate) drugs. The Ayurvedic system, elaborates the dietary guidance and restriction of Viruddha Ahara by which we can live up without any diseases.
