

The Crystal Cosmic Lattice (CCL)

Ilija Lakicevic

Marsla Tita 91/12, 21460 Vrbas, Serbia

Abstract: *The CCL is a phenomenon – it is the source of energy in the entire universe. The transport of energy through the CCL is instant. The CCL responds to human consciousness and can be manipulated with the power of human conscious intent. The CCL is everywhere and is available as the source of clean and unlimited energy.*

Keywords: Crystal Cosmic Lattice, Universal Constant, new science, Human intent, Love

1. Introduction

In the center of a simple atom there's far more there for us to see than how it appears in 4D. Let me give a prediction: scientists will begin to understand this on a grander scale as they continue to look at the Universe. There's something missing within the energy measurement of "everything that should be there" for the motion and scope to exist as we see it. So what's missing? Why can't we see it? Already scientists are postulating the possibility of dark matter. This would be matter we can't see, but which must exist to enable the energy equation to be balanced. No one has said anything about inter dimensionality yet, but they will. They have to, for the elegance of the math eventually will show them very clearly that perhaps what's going on in the Universe is interdimensional in its scope. What's missing in their energy computations is very real interdimensional matter.

Who said that the energy that we can't see follows the same paradigm as what we can see? Oh, before I end this article, I'm going to give you some puzzles. So here's another prediction: science will begin to look for missing dimensions to explain missing energy! And it's about time. And that's the way of it. So it's time to reveal the shape of the Universe, and the push/pull action within dimensional shifts that cause our Universe to do what it does, and show us what it does. Many of the things that we continually observe are hints of it, but they're misinterpreted.

In four dimensions, our physics makes a lot of sense. When we step out of 4D and become interdimensional, however, all those logical rules of physics change. When you get small enough, the laws of basic physics changes, too. It also changes when we get very large. It also changes with time frames.

2. The Speed of Light - discarding a rule of Physics

Before we get into the puzzle of the actual shape of the Universe, I have another prediction. In order to give it, however, I have to lay the groundwork. Let me engage in some plain talk here. I'll give one of the postulates of your modern scientific thinking: the speed of light is absolute, and everything, speedwise, is measured against it, since it's the fastest thing we can see or measure. It has become a yardstick of astronomy and a standard. The idea of "time"

being variable (and it is) is also dependent upon how fast we travel. All of this has become our reality using that magic number, the speed of light. Watch for this; it's going to happen. There's going to come a time when there's an acknowledgment that the speed of light is variable! The reality is that it is indeed different all over the Universe depending on the dimensionality attributes of where it's being measured. There are many speeds of light, and it depends upon where we're standing and what we're looking at.

Now, this statement is at considerable odds with almost everything that we've learned, and with almost everything that has been postulated about the way things work. So the idea won't come easy, or fast. But it has to come. It also messes up the distance measurements in astronomy, but it's about time. Look for it - it's just around the corner. Some will start to issue the proclamations that the speed of light must be variable for things to be the new way we're seeing them. As the eyes of our astronomers get better (meaning the equipment), so it will be that we will have to change the reasons behind what we're seeing. Look for postulates of multidimensional areas in space, and also postulates of light changing its speed from place to place, depending upon the formula around localized reality, especially the time frame. By the way, this will also begin to explain why there was no "big bang," but instead, a "big revelation." Again, I ask this: When unseen things become seen, does that mean that they didn't exist before we saw them? Think about it.

Our science gave us the postulate that when we travel almost at the speed of light, our time changes. So work that backwards: what happens to the speed of light when we change our time instead? It works both ways, and magnetics and gravity play the role of changing time.

3. The CCL is a Phenomenon

The Crystal Cosmic Lattice (CCL) is a specific kind of energy not structured as an object, but as a phenomenon. It is something so common that it is around all of us, yet so mysterious that few know of it. It is the missing piece of energy that we have been looking for so long. It is the energy of love. It is the energy of Spirit. It is the energy of the Universe and I call it the "Crystal Cosmic Lattice".

Here I will start with the big and go down to the small so that one will understand the overview and how it affects the human heart. *The CCL is the common denominator of the*

unified energy source of the Universe. The common denominator means that all things emanate from the CCL. It is difficult to define this all at once, but let me try. The CCL is everywhere. It is throughout the Universe. Everything that we can see and everything we cannot see contains the CCL. From the smallest particles of our physics, and from the electrons forward, the CCL is present. Those of us in physics will begin to understand and recognize this principle, and it will start to make sense as to what this lattice actually is.

4. The Size

Let me first begin with its size. This is only appropriate, even before I define how it works and what it is. ***The CCL is the largest energy we have ever conceived of.*** It encompasses the entire Universe and more. It is present everywhere. There is no place that we can conceive of - no matter what the dimension - that is without the CCL. The CCL is perhaps what we could call the *consciousness of God* and yet ***it is physics and it is energy and it contains conscious love.*** Therefore, what I am telling is that it is pervasive everywhere and encompasses the entire universe, including all dimensions. Can we conceive of something so large? As far as we can see in the skies - as far as any astronomer can gather light on a photographic plate - the CCL is already there. And yet it has one single consciousness all at the same time - always at the same time. ***Distance is nothing to the CCL,*** and that is where things get difficult to explain.

Let me pretend for a moment that my hand was bigger than the universe itself, and as I outstretch my hand, all of the known matter that exists can fit within my palm in a small ball. I am therefore immense! I have the dimensions of God! Within that ball in my hand there are billions of stars, and within that ball there are distances which seem insurmountable and immense to those entities that live there. Within that ball, which is the Universe, it would seem to take forever to get from one end to the other to an entity traveling within it, yet that ball rests easily in my single hand! The CCL is like this, for there truly is no distance that is insurmountable between my thumb and a finger, and the consciousness of my hand is singular. The cellular structure is of one, interlaced with a consciousness which reacts as one. And although within that ball which could be called the Universe within my hand, there seems to be billions of light years of travel, and space and time to conquer, as I hold it in my hand, that is not so. Everything there - the billions of stars - is in my "now."

So one can get an idea of the size of this energy, but one can also get an idea of the *unification* of the CCL. ***The most distant part of this lattice knows exactly what the part that is here in this room is doing.*** The part that is between the cells of my biology, which I call love, knows what is happening 11 billion light years away! ***The CCL has no time,*** and I'll talk about that in a moment.

5. Shape - Order – Luminance

So **the first attribute is the size,** and the size is immense. It is the biggest energy known. It is the biggest energy that exists. Let us talk about its shape and this is even more

difficult. **It is not a grid.** The CCL **has symmetry,** however. But it is not a grid. **If its shape could be revealed to us it would astound us for it would give away something, and it would have to do with what we call human time.** There's evidence of the CCL already, and I'm going to tell how to look for this evidence. Our astronomers look from our Earth in a way that is as though they had one eye closed. They have not really yet seen a stereoscopic view of what is around our planet that is clear. Instead they look from Earth in a monocular way, with no depth perception of what is surrounding us. Therefore, they have not been able to see the ***strings of darkness.*** This is one of the attributes of the CCL that is there for us to see any time we wish. The word "darkness" is interpreted here to mean "lack of light," as apposed to any spiritual meaning. It is as though we looked into the starry sky at night and saw that many of the star groupings had narrow "highways" of nothing between them, but a clear pattern.

There was no big bang, since it does not make sense to have a universe that explodes from one central creative point, not to be evenly dispersed. And I tell to look for the clumping effect as evidence that there was no original point of explosion. Now there's more, and now I tell what that is. For there will come a time when we will be able to put our "eyes" and our telescopes at very different and far away places. One may even be on another planet, and together as they look at the universe in a stereoscopic way, like our two eyes look out upon the world, they will finally see the three-dimensional image before them. And what they will see are the highways of seeming blackness between the clumps of star matter. Straight lines of darkness will be evident, giving the Universe *direction* - giving it *symmetry* - allowing for a mystery to develop of how such a thing could be - like seeming highways with apparent nothingness between the clumps. It is going to happen.

The CCL has no visible light, even though it is the essence of light. The lattice energy is in a NULL balance, and I am going to tell about that right now. ***For the energy is in a balanced state called the null balance where the polarity of its most powerful attributes are balanced to zero. The null energy has fantastic power, but in its common resting state, it seems to be void due to the zero balance.*** It's when we unbalance the polarity that the power is released, we see. Our astronomers have looked at the Universe and the cosmos, with their ways of measuring the energy there, and they look to the skies and they measure the whole energy. What they have noted with some frustration is that **there is far less matter and light than there is measured energy!** This is a known situation with our scientists. If we ask our scientists why this should be, they will postulate all manner of things, including the existence of "dark matter." ***What they are seeing is void energy. It is the CCL that they are measuring.*** The CCL energy is everywhere, and when I am done with this article, we will know what triggers it, and we'll know how it's used. We'll know how it reacts to other energy, and we'll know why it exists.

As mentioned, **in a nulled form this incredible active energy would appear to us to be at a zero measurement, yet this CCL is potent at ALL points and in ALL areas.** We are referring to it in the very small particles of the atom.

When scientists are talking about the distance of the nucleus to the electron haze, they are speaking of the CCL principle. When scientists are talking about the working formula for the distance of the electron haze elements from the nucleus, they are speaking about the interaction of energy from the CCL. When scientists are talking about the gamma ray activity from 11 billion light years away, they are talking about the CCL. From the largest to the smallest, **this energy source is immense and it's quiet. It is only when it is called upon and destabilized in designed ways that it provides power. It is the common denominator and the stabilizer of all energy and matter everywhere - the CCL.** And when the physics is known by humans, all manner of things will open up for us, not just in communication, but unlimited power everywhere - UNLIMITED POWER!

6. Time-Speed

Let me tell something about the **lattice energy**. It responds to TIME. Here is something else for our scientists to look at: when we find an event in the Universe that we know has **time altering potential**, observe **how its physical displayed energy bends**. *Everything in the universe seems to spin*, does it not? And according to the laws of physics, *some particles spinning off should be at right angles to the spin*. *Some should be perpendicular to the spin*. That's normal physics. Watch, however, for the ones which are neither! For those are the ones that line up with the symmetry of the CCL. **They're the ones that "point" to the lattice patterned energy and I'm talking about events such as spewing black holes and other phenomena in the universe which seem to pour forth huge energy in a stream.** Watch for those streams to point in a similar direction but not necessarily to physically align themselves to the spin of the object creating them (as one might expect). Our scientists will ask, "Why is such a thing existing"? They eventually must postulate that there is another force which aligns this "pointing," like a giant cosmic magnet. They are seeing the energy pointing and bending to the symmetry of The Cosmic Lattice.

We already know that *time is relative*. Our scientists have told us so, and I tell that *this particular fact is going to play a large part in knowing about the attributes of the CCL*. Spiritual things on this planet are related to the lattice. *The time frame that we are currently in has been changed and is related to the CCL*. We have told that the energy of this cosmic common denominator is related to time, and now I'm telling that time is also changing for US. What does it mean? *Let me tell that it means that the CCL responds to human consciousness!* Human consciousness changes physics, that is an understatement. All things are possible with the intent of the humans on this planet right now. For we have literal control of the lattice which is universal. Again, I tell that the lattice knows on the other side of the universe, our names! *Our consciousness has uplifted this planet into a vibration which is new. This consciousness has actually "pulled" upon the lattice to enable the earth to begin a time shift, one that will be relative to us, but obvious to others (off planet).* What this means is that we may see or feel nothing unusual, but eventually *look to certain attributes of the cosmos to appear to slow down. This will indicate that we are moving (or vibrating) in a*

different time frame. The actual mechanical reason behind it is CCL, which is doing the work. *Our consciousness, therefore, has changed the physics of our own reality.*

Many of us are already aware of the communication between humans that seems to surpass any speed known to man. Identical twins - twin flames - soul mates, one on one side of the earth, the other on the other side, often have instant communications that has been reported and witnessed. Perhaps one twin is in an anxiety mode, and instantly the other one feels it! They might call each other and say, "What happened a moment or two ago?" And *they both realize they felt the same thing at the same exact time. What does that do to our physical idea of TIME? What does that say about the power of human consciousness to transmute all distance and time?* I'll tell you what makes it happen: *It's the mechanics of the CCL. We are interconnected instantly, and are using the lattice. It is our Spiritual power source and it's also using physics.*

If we were able to take a human right now and magically transport him to the other side of the known universe - incredibly far away - an unimaginable distance to us - I am here to say that the lattice would allow for a common communication that is instant with him, no matter the distance! *The common denominator of this lattice energy is without light only because it is in a NULL TIME - null energy and null time.*

Let me speak of *now time*, an interdimensional spot where Spirit is, and where all the things in the past and the potentials of the future are in one place - that is *now time*. *The CCL is NOT in now time, it is in null time. Null time is time which equals zero, whereas now time has motion in a circle. The CCL is in a constantly balanced state, and in that balanced energy, it is potentially ready to receive input for release of energy, and that input is available to the human consciousness. It "sees" all TIME as zero, never moving, even though many time frames exist within its energy. That is why, no matter what time frame is our reality, communication is instant between all entities that know of the lattice.* This is a difficult concept for us to understand, since we don't even yet believe that there are many time frames present as we look through our instruments at "impossible physics" being displayed in the cosmos. *Time is like the air we breathe. We watch incredible storms, with wind blowing many directions at many speeds, yet we breathe it gently and normally, even in the midst of a great storm. Therefore OUR breathing air, in our lungs, is nominally at rest, even while the air around us is in turmoil. The CCL is like this.*

The CCL is what allows the mechanics for co-creation, for synchronicity, for what I call love. The CCL contains the mechanics which allow for miracles on the planet. It responds to physics - it responds to consciousness. And so we begin to see the meld between what has been placed in the Universe for us.

The CCL is not God! But God (Spirit) uses naturally occurring physics for the mechanics of miracles. Some of us wish to separate physics from God. They say, "Don't make science into God. Don't take away the magic!" I say, "Our

time is limited where we can think in this fashion. For when we eventually discover some of the physical mechanics of Spirit, it's not going to diminish the magnificence of it at all, since the elegance of God resides in the very cells of our body!" God absolutely uses the common physicalness of the energy around the cosmos for power, just like we are being invited to do. Understanding the physics of Spirit does not void out the LOVE! Instead, it gives a beautiful symmetry and logic to all things and these things will become clearer to us as we move into the vibration where we can also use the energy of the lattice. The lattice, therefore, is not God. It is one of the most powerful TOOLS of Spirit that exists today, and contains much of what I call unexplainable magic, the way of God. Does it shock us that Spirit uses the very physics it created to enable the way things work? Why create tools, and ignore them? No. This is a revelation to us of HOW Spirit works in the cosmos.

So I am telling how it works. But that's not all, for the CCL is now responding to something it never did before on our planet. Energy is being created and time is being altered - all through human intent. There is no greater power in the Universe than HUMAN INTENT and LOVE. This is the place I finally have to correlate and equate it with the physics of love!

When we give intent it is not some mysterious energy that seems to fly into the ethers and somehow manifest something we want or need? Now can we see that it has symmetry and size and purpose and consciousness, and that there is a mechanical attribute of physics and love around it called human intent. Now we begin to understand WHY New Age energy facilitators can do so much! They are "tapping in" to the CCL. There is no longer mystery regarding this, instead it will be someday replaced with good solid science, God given, and Universal.

I will not be the one to bring forth this principle, and it will be known by many names, and will be the source of tremendous power - actual physical power - power that we can use for travel and energy, power that we can use for life sustenance. The resources of our planet that we have been using up to create power have a limit. There is no cleaner power anywhere than the lattice. This is physics, and it is known even by the enlightened that travel from here to there within the cosmos - in fact they often "ride" the lattice strings.

7. E.T.s

Let me tell you about certain E.T.s and The Cosmic Lattice. There was a group that existed on this planet, near this planet, and around this planet that was extremely curious about US. They poked us and they prodded us and they abducted us. And there was one all-encompassing reason for their curiosity - and maybe now you'll understand more about it. WE, dear ones, with the "piece of God" that sits in us (our duality) are able to communicate with The Cosmic Lattice, and these visitors see this fact clearly, for it is their power source! They want to know, "what kind of a creature is it that lives on this small planet, and only this planet, that has that kind of power! This will also explain, dear ones, why the E.T.s did not simply come and land here and

showed them and ask us about this incredible human attribute. They recognized that we didn't understand what we have. Also, because we are so incredibly powerful through our intent, just a few of us could simply vaporize them (if we knew how). That is how powerful we are. And so they captured us in FEAR, one at a time, for they respected our power and they wanted it - and they're curious beyond measure how we are able to connect to it. FEAR disconnects joy and creativity. Creativity and joy are related to INTENT, and their removal allows abduction. We never had to fear these creatures, for if they had appeared to us, all we had to do is look at them and say, "I do not give you permission to be here." And believe me, dear ones, they had to beat a retreat, for we contain the power of INTENT which is connected to the Universal power source called The Cosmic Lattice - and they know it - but the joke is that we don't.

8. Love triggers the CCL

The greatest power in the Universe and on this planet right now is human INTENT. It's **intent** that will open the door to the house of joy. And what is it that we're going to intend first that's going to get us over the threshold that lets us stand in that place where we can laugh and have peace and be joyful with who we are? It is the intent to have LOVE to enter our lives. We're inviting the CCL! We're inviting the power that is beyond all power! It is profound!

Joy is unlimited, and can never have a lid.

Each one of us carries a Light that is seen clearly by every entity in the universe. There are entities so far away that we cannot even conceive that they might know of our Light. However, they know what is taking place here, and they are preparing for their changes because of what we are doing. They are sending us love which is instant for what we have done. Our task on this planet is universal and it has very little to do with earth, did we know that? For what happened here already affected all in the Universe.

Physicists already know of part of the lattice. The ones who are discovering that consciousness changes their experiments are the ones who know something's up. It's coming.

Our free spiritual choice is unique to this speck of this universe that we call Earth. Absolutely unique is our ability to choose our own spiritual level. No other planet has this attribute.

We're going to have to understand more about energy in order to facilitate life on the planet. We're going to have to understand more about energy to facilitate the biology on the planet.

9. Transportation of energy through the CCL

The CCL is an energy that pervades the universe and is consistent. It passes through all matter, and it is available all the time. It is a physics staple of the way things work throughout the entire universe that is visible. The light is slow, compared to the communication of the lattice, and that

even though there is a mechanical attribute of the lattice, communication is almost instantaneous all through it. *The speed of energy from one end of the universe to the other is almost instant. Actually there are no ends.*

The cosmic energy event we see taking place 12 billion light years away did not happen 12 billion years ago. There is a communication attribute that indicates that it is happening now, to correspond with our millennium shift. It is not something that took place 12 billion light years ago.

I gave elementary information of the shape of the lattice. Now I'm going to fill in the cracks in the information I gave above. I'm going to tell what the real shape of the lattice is. I'm going to tell the construction of it, the best I can in terms that are non-scientific. I'm also going to give several attributes of the lattice, and I'm going to tell how to use it. Then I'm going to tell the real miracle, but the physics has to be shared first.

The CCL is indeed the very essence of the energy of healing.

Again I go to the biggest of the big, before I get to the smallest of the small, in order to talk about Humans. In these moments that I speak about physics, I also am speaking of love.

The CCL is not a net. It is not singular. It is not one dimension. If it pervades the universe, as I have said, then it has to be everywhere and indeed the lattice is everywhere. I wish to reveal the shape: the actual shape is of cells that are closed compartments. That should not shock or surprise us. It mimics our body. For now, I will call the cells "energy cells." They are in a honeycomb shape, and these shapes (the cells) each have twelve sides. Each energy cell of the cosmic lattice all around us remains unseen, but we will be able to eventually measure its energy. This lattice is a structure, whose parts do not touch. Each one of these twelve-sided honeycombed energy-cells, which are everywhere, do not touch one another. Yet they exist side by side, as though they do touch. They even look like they do, but they do not, for there is something that holds them apart.

It's important that we understand that these lattice cells never touch one another, and there is a reason why they do not. *It is all part of the communication within the lattice. Energy transfer within the lattice also mimics physics at the smallest levels - also being atomic structures that do not touch.* It also mimics the most elegant part of our body - the part that is responsible for our memory - for our remembrance, and for our reactions - the Human brain. The synapse parts (the wiring) within that organ do not touch either. These are the ways of the physics attributes that transmit (or relay) energy. It is not new. Look for it, for it's everywhere. It is also the common structure of the lattice.

Now I'm going to give you some attributes of these cells. Some of us, especially those who are science minded, will be entertained.

The CCL is balanced, but it is not quiet. The lattice has astounding power. It has a flow of energy that I cannot explain, for there is no paradigm model for it yet in our

thinking. Therefore, we would not easily understand. *The lattice has vents that I can best describe as necessary for the flow of energy. It balances the slight inequity of the polarity. The vents also have to do with time, which I will tell more about in a moment. We will always find two vents together. One will be prominent, the other will be secondary. We might graphically and clearly see one, but we will have to look carefully to see its partner. There are always two. This is an axiom or physical rule of the lattice energy, and of the universe.*

The vents are usually at the center of the galaxies. *The distance between the vents determines the spin direction of a galaxy, and speed of matter around its center. It is a classic push and pull scenario, and matter responds to it. The vents are very necessary for the balance of our universal energy. The vents are also energy portals, (drains, to us), and are where the front of the lattice touches the back. The back of the lattice holds a universe whose vents are opposite.* Note: This IS NOT an alternate universe. It's also ours. Although this may bring us a paradox at the moment, those in our future, especially reading this transcription who have good scientific intuition, will discover the physics that will validate the meaning of this information.

Therefore, at the center of our own galaxy there is a pair of vents, one of which we can see if we chose. The other one is hiding. But the vents always appear in pairs. This is dramatic; it is powerful; it is the lattice balancing itself.

I'm going to give an attribute of the CCL and the energy within it, which is difficult to explain. I'm going to discuss *the mechanics of the speed of transmission of energy within the lattice*, and I am going to show how the speed of the Lattice is stellar compared to the slow transmission of light.

This discussion of speed has a metaphor, an analogy that exists on our own planet. Some of us are aware that if we were to take something physical and force it through the water in the ocean, it would be fairly slow going. The water is thick, and offers a medium that requires a great amount of energy to force something through it. Think of the fastest things in the oceans. They would be some of the fast fish, and even some of our mechanical devices [submarines]. But they and their speed, pale in comparison to the speed of giant ocean waves created by the energy of an earthquake.

Many of us are aware that the speed of quake-generated waves in the ocean approaches the speed of sound itself! That's how fast it goes. Consider how much energy it would take to propel something the size of a mountain at the speed of sound, through the ocean. Many would say it could not be done, yet waves seem to do it easily.

The reason is because *a wave is not the transportation of MATTER from one place to another* (like a fish or a submarine or the matter in a mountain). *The wave is the transportation of ENERGY from one place to another.*

Although the metaphor has its limits as we compare the two, in essence *that is exactly what takes place on the lattice on*

a far, far grander scale. Light is the transportation of matter-photons in space. It might have a wave-like appearance, but its speed is limited due to its mass, and the speed is relatively slow. Similar to a fish or a mechanical device in the water, light is the transportation of matter through a substance. It's when the lattice cells bump together that they create patterns (waves) due to their bumping, at a speed that is almost instant through billions and billions of light years. Not only is light slow, but it must also penetrate through other matter, not just the emptiness of space. There is dust, gas, and magnetics, all which block and bend it.

The transmission of energy from the lattice is clean, fast, and almost instant throughout its vastness. That's because the energy medium is uniform, and transmits with a system that easily recognizes what is being passed within in (much like the wave does with water molecules). Now I have given a mechanic attribute of how energy is transmitted in the real universe.

There are three rules of physics for the universal lattice, but none of them will respond to what is called Newtonian physics or the relativistic physics of Einstein. For Newtonian and relativistic physics is mostly about the behavior of matter. The physics rules that I'm going to give are about energy, and they are different - very, very different.

- 1) The speed of energy moving through the lattice is always the same. It never varies. It is a constant law of energy physics. It is the speed at which the lattice cells bump together, and this creates waves of energy whose speed is always the same. That is the first one. Here is the second, and it's tricky.
- 2) It always takes the same amount of time for energy to transverse the internal distance of one lattice cell. (an absolute time period to go from one side to the other, inside of a lattice cell). This time segment is always the same, and never varies.
The third axiom is this:
- 3) The cells have a varying size. That is to say, there are areas in the universe where the energy cells of the cosmic lattice are large, and other areas where they are small.

Here one might say. "You just got through saying that it takes a known amount of time to transverse the distance of a cell. If some are large, and some are small, won't that make a difference in the time it takes? After all, you are changing the distance!"

No, the time is always the same!

"Then," one might also say, "something has to give. It doesn't make sense to take the exact same time to go a short distance or a long distance, if the speed has to be the same."

One is right. Here's where challenge one to understand that the paradox of this is that the time elements, as measured, must change! Therefore, when one moves into an area of space where the cells are smaller, one is going to receive a different measurement of time than when they're larger. This will explain to us why our astronomers see "impossible physics" through their telescopes-physics that cannot occur

according to the assumed rules. They are looking at physics in a time frame that has smaller or larger cells than our own. Therefore the third axiom is the only variable one, and it is time. The units of time change in relationship to the size of the lattice cells.

Now let me discuss the use of the cosmic lattice, physics wise (not biologically). I previously told that the lattice null energy is balanced to zero. I told that each cell has tremendous power, but it is balanced by another power along side it, which has opposite polarity. This "nulls" out the apparent potential, so that it all appears invisible to us. The energy, therefore, appears to be zero.

It's when the lattice is deliberately unbalanced that we really get to see the power. If we could only understand how to manipulate the null so we could unbalance it just slightly, the result would be tremendous free energy. Let me say again, that one of the reasons this would be safe for us to accomplish, is because none of the cells touch each other. We will not have a chain reaction, like we have in our nuclear matter science. So we can capture the energy of one, two, three, or as many cells as we wish, when we learn how to manipulate them.

One can ask about the null - about the polarity. What kind of energies are there that would oppose each other so well? Let me give an answer that might be difficult to understand at this time, but through discovery and with time, it will make sense. Opposite energy attributes that create the null are polarized energies. They are almost mirror images of one another that together create a quiet, zero null. This is part of the balance of the universe, and is everywhere. It is also this way in light and matter. It is also true, however, that the "mirror-image" of energy, light and matter is not perfectly balanced. Due to the bias of our "kind" of universe (call it the "positive" one if you like), the "anti-energy," or mirror image of the positive, is only slightly less powerful. It is this slight unbalance that creates the vents that I spoke of before. The vents are necessary to allow for the balance to be maintained. Otherwise, the major "null" posturing would not last long, and the lattice would be constantly unbalanced. The vents, therefore "drain" off the slight unbalance of the bias.

The last physics attribute is one that I will only hint at. The CCL is indeed the cosmic constant that has been looked for in science forever. There are those who have asked, "what is the actual mechanical connection between the CCL and matter?" Let's just say that it is the characteristic of this constant that "tunes the strings" of the music of matter. It sets the frequencies for the smallest parts, and those frequencies vary depending on where they are in the cosmos. The lattice is also the key to quick travel of large physical objects - even of very short distances.

The lattice is truly available now for each person here.

10. Manipulation of the CCL

I would like to eventually understand how to manipulate the lattice, so that I may pull on its energy. I understand that this can be done anywhere at any time on Earth, or in space.

I've decided to do it with the power of human conscious intent [2-25]. There was a five years old girl in South Africa with name Larette who was diagnosed with heavy brain damages (vaccination!?) and doctors in Johannesburg proclaimed her the lost case before I met her in April 2018. Interesting in this case is that Larette's parents had abandon her and her grandma, who loves her Godly, took her to herself to care about her and that is how I met her. It was only the permanent repetition of the conscious intent what has healed her within two months. Of course I've created the conscious intent for her and her grandma worked with her for two months following my instructions. I will attach here the video as proof and more details could be found in my paper "The Power of Conscious Human Intent".

Watch the video here: <https://youtu.be/iU-C7x0rXTQ>

All those who do not trust the power of human conscious intent could follow instructions for below.

It is done completely and totally with magnetics-active magnetics. It is accomplished with the creation of carefully placed patterns of large magnetic fields, which must be active (created with energy, not naturally existing). When we discover how this works, we will also find that this particular process on the planet is not new, and that our experimenters have actually done it before [Pons-Fleishman].

During the times it was done before, no one understood what was happening. The process was far beyond our ability to control, and they didn't even know the principles, yet we tried it anyway. But there is a possibility to control the experiment and therefore create disciplined and sustained energy, seemingly out of nothing (the null). Like so many other physics processes, however, it is going to take a tremendous amount of energy in order to unbalance even one cell's null attribute. So we're going to have a vast amount of energy pumped into the experiment before we can see the results. Once we understand how to "prod" the null to unbalance itself, we will be rewarded with a steady flow of energy, far beyond what we put into it. This is accomplished, since we create our own tiny "vent." An unbalanced cell creates a situation where the other cells around it will try to "feed" energy to the one that is unbalanced. This creates a tap that will pull upon the lattice indefinitely, as long as our work matches the properties the lattice expects to see. I know these sounds like science fiction, but eventually it can be THE energy source for our planet.

Here's how it works. Two magnetic fields together, postured in the correct way - a way that is very three - dimensional in our thinking process - will create a "designed magnetic field" that is very specific. It's one we have never seen, and does not exist naturally. Start with trying many magnetics fields, postured against one another - of unequal force and pattern, and at right angles. Don't make any assumptions. Think freely. Done in the right fashion, these two fields will create a third pattern, which is unique and is the product of the original two. This third custom created pattern is the one we what to deal with, and is the one that has the potential of manipulating the lattice. Once we have created it, we will

know of its special qualities by how dramatically it changes the physics around it. It won't be subtle in its exposition - believe me. We will know when we have it.

Here is a caution. Keep this experiment away from your bodies! Keep the experiment in check with our scientific methods. Go slowly. Understand what we're seeing before we go to the next step. Do not expose yourselves to any magnetic fields. Remotely conduct all energy experiments. Remember that magnetics also plays an important part within your body.

Here is another. Understand that if we unbalance the lattice too grandly and too greatly, we will have a time displacement, for the process also involves the property of TIME. I don't mean that we have to wait for it. I mean that one of the actual physical players in the creative process of unbalancing the lattice is the manipulation of the time-frame of matter (a little known attribute of every particle of matter in the universe). This is not time travel, but time displacement. It is where I am actually addressing tiny parts of matter, and changing the time-frame they are in. When the inequity of time-frames meet one another (matter mixed up with differing time attributes), the result is a displacement of distance. Although there is no horrendous danger for the earth within this time displacement, it can and will affect the local situation within the experiment. In other words, it can create a matter-distorting effect, completely stopping the experiment, and actually dislocating the parts.

11. Conclusions

The Crystal Cosmic Lattice (CCL) is a specific kind of energy not structured as an object, but as a phenomenon. The CCL is the common denominator of the unified energy source of the Universe.

The CCL is the largest energy we have ever conceived of. The CCL is perhaps what we could call the consciousness of God and yet it is physics and it is energy and it contains conscious love.

Distance is nothing to the CCL.

The CCL has no time, but it responds to time - we are moving (or vibrating) in a different time frame.

The CCL has symmetry.

The CCL has no visible light, even though it is the essence of light. The lattice energy is in a NULL balance. For the energy is in a balanced state called the null balance where the polarity of its most powerful attributes are balanced to zero. The null energy has fantastic power, but in its common resting state, it seems to be void due to the zero balance.

In a nulled form this incredible active energy would appear to us to be at a zero measurement, yet this CCL is potent at ALL points and in ALL areas. The CCL energy source is immense and it's quiet. It is only when it is called upon and destabilized in designed ways that it provides power. It is the common denominator and the stabilizer of all energy and matter everywhere.

The time frame that we are currently in has been changed and is related to the CCL.

The CCL responds to human consciousness! The CCL is in a constantly balanced state, and in that balanced energy, it is potentially ready to receive input for release of energy, and that input is available to the human consciousness.

The common denominator of this lattice energy is without light only because it is in a NULL TIME - null energy and null time.

The CCL is what allows the mechanics for co-creation, for synchronicity, for what I call love.

The speed of energy from one end of the universe to the other is almost instant. Actually there are no ends.

He CCL is made of "energy cells" in a honeycomb shape whose parts do not touch.

The CCL is balanced, but it is not quiet. The lattice has astounding power. It has a flow of energy. The lattice has vents that I can best describe as necessary for the flow of energy. It balances the slight inequity of the polarity. The vents also have to do with time. We will always find two vents together. One will be prominent, the other will be secondary. We might graphically and clearly see one, but we will have to look carefully to see its partner. There are always two. This is an axiom or physical rule of the lattice energy, and of the universe.

At the center of our own galaxy there is a pair of vents, one of which we can see if we chose. The other one is hiding. But the vents always appear in pairs. This is dramatic; it is powerful; it is the lattice balancing itself.

The transmission of energy from the lattice is clean, fast, and almost instant throughout its vastness.

There are three rules of physics for the universal lattice:

- 1) The speed of energy moving through the lattice is always the same. It never varies. It is a constant law of energy physics. It is the speed at which the lattice cells bump together, and this creates waves of energy whose speed is always the same. That is the first one.
- 2) It always takes the same amount of time for energy to transverse the internal distance of one lattice cell. (an absolute time period to go from one side to the other, inside of a lattice cell). This time segment is always the same, and never varies.
- 3) The cells have a varying size. That is to say, there are areas in the universe where the energy cells of the cosmic lattice are large, and other areas where they are small.

The CCL is indeed the cosmic constant that has been looked for in science forever. It is the characteristic of this constant that "tunes the strings" of the music of matter. It sets the frequencies for the smallest parts, and those frequencies vary depending on where they are in the cosmos.

The lattice is also the key to quick travel of large physical objects - even of very short distances.

The lattice is truly available now for each person here.

The CCL can be manipulated either by the power of human conscious intent or with magnetics-active magnetics.

I have decided for the power of human conscious intent and have succeeded in it.

Author Profile

I was born on August 6, 1950 in Grab, Montenegro (former Yugoslavia).

1982 – Acquired my PhD in the field of atomic and plasma physics, at the same Faculty, under the title: "Regularities and Systematic trends of Stark Width and Shift Parameters of Spectral Lines in Plasmas".

1985 -1987 Spent two years as fellow of the Alexander von Humboldt Foundation from Bonn (Germany) at the University Düsseldorf developing plasma UV-spectroscopy at the tokamak UNITOR and performing measurements of the plasma instabilities in the scrape-off layer at the tokamak TEXTOR in Jullich (Germany).

1987 – 1991 Worked as the guest scientist at the Max-Planck-Institute for Plasma Physics in Garching by Munich (Germany) performing measurements of the magnetic field configuration at the

stellarator W7AS as well as the measurements of the limiter heat load.

1991 – 2000 Was working in the Institute of Physics in Zemun (Serbia) on investigations of the plasma force-free configurations and in 1995 I acquired the Research Professor degree.

2000 – At the end of 2000 I chose to leave the Institute of Physics and went on my own way to discover and learn the God Aton's principles and laws of creation.

After 18 years of the progression toward that sacred goal, I finally succeeded and now I know many of the God Aton's creational principles and laws (unknown until now) and can apply them for the simple and efficient creations which make the basis for a new life quality on this planet.

I am a pioneer, creating with the New Conscious Energy and building a new civilization without electricity.

I've developed the TESLA RADIATION BALANCER – the genuine product in form of a self-adhesive sticker certified by the Hado Life Institute of Dr. Masaru Emoto which 100% balances radiation from any device, if attached to it, protecting the human body and environment from its harmful effects and eliminating with time the damages already caused by the radiation. It can be successfully applied to: cell phones, computers, laptops, microwave ovens, cordless phones, tablets, wireless monitors, Wi-Fi routers, TV-sets, Radios, and any other source of radiation.

The upgraded version of the TRB is my QRB (Quantum Radiation Balancer) which is protection from any kind of negativities, including 5G, and is integrated in the product 5GBioshield – 5gbioshield.com.

Thanks to the consistent pursuit of my Leitmotif "The Authority of Truth rather than the Truth of Authority" I have experimentally proved the true atom, cell and particle "ATON" concept. According to the "ATON" concept, atoms, cells and particles are made of light which are spinning around the centering Mind (Spirit) points (the black holes). Nature expresses energy as electric potential in only one way, which is the same way both for the atomic and for the stellar scale: by projecting mentally the rings of visible light which are spinning around the centering Spirit points. This amazing beauty of creational simplicity is the basic fundamental truth of a new science that is based on the knowledge of the cause.

I wrote two books: "GOD IN THE ATOM" and "DODECA 101 LOVE ENERGY" which are available on my website.

I use to practice sport very gladly and am a unique tennis coach.
