

circulation and the South East winds make sure there is plenty of freshly circulated air if the bedroom is placed in this direction. A room with good circulation improves intimacy and resolves any marital problems that couples have.

- The reason for temple or pooja ghar is in north-east direction is for easy access of vitamin-D by sunrays and good effect of magnetic energy.
- The earth is rotating and rolling towards the North-East direction, hence keeping heavy weight at that direction would strain its moment. **So North, North East Corner, East and the center** are the places in the Forward direction of the Movement (like the handle bar of a motorbike). Keeping any heavy weight in these places will obstruct the movement and create discomforts. **Avoiding** heavy weight in these areas make the life peaceful and prosperous[11]

Orientation is important for building construction .the orientation of the house should be such that the effects of sun rays in midhours should be minimum. Because at that time the radioactivity of sun rays are at higher levels which is not good for health.

## 4. Result and Discussion

In 4<sup>th</sup> semester when I made my first drawing and shown to my father .then he made me to understand vastu .now a days we are making drawing with our own desire means there is no difference between an educated engineer and an 20 years old labour. We have to bring the difference we have to become an engineer who create or construct a home not just a house with a roof and walls. The culture and tradition made by our ancestors that science which is seen by

us today in different way, if we understood our known knowledge and tradition then we will remain disciplined and the science which we are trying to understand will come into our behavior with ease if we understand the fact and secrets then the modern civil will be more brightened which will more better and pleasant.

## 5. Conclusion

The study of ancient civil, architecture, structure and culture and its combination with modern civil will lead to sparkle the modernity. Today we need to make a home not just a house. We have to accept the fact that our elders identified our DNA and present a frame work in which we can mold easily. if we want to understand science then we need to understand Indian tradition because our tradition our customs and practice is our science.

By understanding Ancient and old techniques vastu etc. we can easily understand the facts of science. Otherwise the distance measured by our ancestors and nasa’s Distance won’t be almost equal. *“Many of the advances in the sciences that we consider today to have been made in Europe were in fact made in India centuries ago.”*

- Grant Duffs (British Historian)

“Whatever sphere of human mind you may select for your special study, whether it be language, or religion, or mythology or philosophy, whether it be laws or customs, primitive art or primitive science, every where you have to go to India. Whether you like it or not because some of the most valuable and most instructive materials in the history of man are treasured up in India and in India only”

- Max Muller [12]
