

Horoscope Probability Secret in Scientific Method

Keerthivasan Chandrasekaran

Abstract: Basics of universes are applied in the rules created by astrologers, and the prediction is made. The sequence of earth acts are predicted by applying rules of horoscope to basics. These basics are classified as 9 planets, 27 star clusters, and 12 zodiac signs. The universe/earth are classified or divided into basics like 9, 12, and 27- the planets, star clusters, and zodiac signs. The graha saram pins the plot to make the basics as horoscope. The graha saram is the approximate degree of planets in the universe. These degrees are pointed into the horoscope by the rules and basics. The rules are derived by relating the basics and sequence of events in basics.

Keywords: Zodiac, Planets, Nakshatra, Rules, 3,9,12,27, Basics, Degreee

Birth chart as a starting point: The notes describe a horoscope or birth chart as the basis for making a prediction for a person or country.

- 1) Three groups used in the chart: They list nine planets, 27 star clusters and 12 zodiac signs.
- 2) Planetary positions: The notes use the term graha saram for a concept applied to the birth chart, apparently concerning planetary movement or positions.
- 3) Interpreting events: Astrologers are described as using relationships among these chart elements and a sequence of events to form predictions.
- 4) Questions: "Why 9, why 12, why 27?" and why these categories are associated with planets, stars and degrees.
- 5) It is probability mathematics based on the basics.
- 6) By applying rules to the basics, events are predicted. The notes say the rules are based on probability mathematics.
- 7) Algorithms and rules are presented as example stories for understanding how to make predictions.
- 8) When predictions are made. Approximately 75 percent appear to be supported by life evidence, which can lead people to trust the commonly presented opinion.
- 9) The rules are based on the same basics, but people may put the resulting beliefs into action.
- 10) Those actions can make a prediction seem real.
- 11) Predictions are opportunities based on rules and basics; how we use them affects how things turn out.
- 12) At birth, the positions of planets and the horoscope are recorded. The notes say the birth time determines a person's lagna (ascendant) and that applying rules to these details gives more precise predictions.
- 13) Events, including birth time, are assessed or predicted approximately using basic rules, and a person's graha saram is considered.
- 14) The basics can be classified or compared with planets because, according to the notes, they share a basic nature.
- 15) As per abiogenies theory, living beings are derived from earth nonliving beings by chemical reaction so planet can share same basics of living being
- 16) The notes connect the numbers 9, 3, and 0 with God and the decimal system.
- 17) They call 3 the base and show how it relates to 9, 12, and 27:
 - $3 \times 3 = 9$
 - $9 + 3 = 12$
 - $9 \times 3 = 27$

The notes connect this pattern with the universe. 3 added thrice and resulted in 9 and 9 are the basics of all. 3 gods and 9 basic results in 12 by adding 3 and 9 so that is

universe and the universe is segregated in 12 zodiacs. 9 basics are multiplied by 3 gods so that makes $9 \times 3 = 27$

- 18) They identify three gods: Brahma, Vishnu, and Shiva.
- 19) They say that multiplying 3 by 3 gives 9.
- 20) They describe singularity as the source from which the three gods form. They also refer to the Hiranyagarbha Sukta. 0 is singularity and 3 is 3 gods.
- 21) Tesla says that the number 3 is fundamental and mention the numbers 3, 6, and 9.
- 22) They describe karanam and bhagam as "basics" used with 9, 12, and 27. According to the horoscope, rules applied to these basics are used to predict events.
- 23) They say a horoscope is predicted by using 9 planets, 12 zodiac signs, and 27 nakshatras, along with rules applied to the basics.

Conclusion

This thesis presents astrology as a system that interprets birth information through nine planets, twelve zodiac signs, twenty-seven nakshatras, and planetary positions known as graha saram. It proposes that astrologers apply established rules and recurring numerical patterns—particularly those involving 3, 9, 12, and 27—to identify possible relationships between celestial arrangements and events in human life.

The discussion also connects these numerical patterns with Hindu philosophical ideas, including Brahma, Vishnu, Shiva, singularity, and the Hiranyagarbha Sukta. These associations offer a symbolic framework for understanding the structure described in the horoscope. However, claims about predictive accuracy, probability, abiogenesis, and numerical significance require reliable evidence and systematic testing before they can be treated as scientific conclusions.

Predictions can influence beliefs, decisions, while actual outcomes also depend on personal choices and circumstances and by this probability of events predicted in the horoscope at an approximate manner.

This paves a path to understanding secret behind some horoscope events are really happening approximately so that made it to classify as pseudoscience.
